

CLIMATE CHANGE TRANSITION INVESTMENT FUND

Quarterly Investment Review

PRODUCT OVERVIEW

The GMO Climate Change Transition Investment Fund seeks to generate high total return by investing primarily in equities of companies GMO believes are positioned to benefit, directly or indirectly, from efforts to curb or mitigate the long-term effects of global climate change, to address the environmental challenges presented by global climate change, or to help the world adapt to climate change through improved efficiency of resource consumption. We invest globally across the capitalization spectrum, which allows us to identify attractive investment opportunities wherever they may be.

We are seeing exceptional opportunities for long-term investors abound in a world mobilizing to address climate change, and profitability associated with efforts to mitigate and adapt to climate change is largely independent of the global economy. Climate change investors can benefit from this unique, diversifying source of return, historically available at attractive valuations given the secular tailwinds of change.

This is a marketing communication and a financial promotion. Past performance does not predict future returns.

MAJOR PERFORMANCE DRIVERS

The second quarter saw a 180-degree shift in market sentiment, with risk-on enthusiasm driving appetite for AI hardware stocks along with more cyclical and speculative names. Much of this bubbly sentiment was in areas/sectors out of scope for this portfolio, so we did not participate in much of the froth. The market largely shrugged off war in Iran by the start of the quarter; energy prices fell, and commodities more generally were down. Outside of a few clean energy names that had AI datacenter spending hype driving their performance, that sector was also broadly down. Against this backdrop, the Climate Change portfolio was up, but underperformed the MSCI ACWI Index.

Digging into performance across the portfolio, our clean energy book gave back a portion of its outsized gains from the prior three quarters. Biofuel names felt the knock-on effect as the economic case for fossil fuel substitution temporarily softened. Darling Ingredients and Green Plains, both strong contributors in prior quarters, gave back some of their earlier 2026 gains. Lithium markets were similarly pressured: demand signals from China disappointed as EV sales growth moderated, while the prospect of meaningful new supply coming online drove prices lower. We see this less as a reversal of the long-term electrification story and more as a valuation reset. Downstream, the battery and energy storage producers also derated a little, giving us the opportunity to top up positions like LG Chem and CATL.

Although AI hardware and memory chip names are outside of this portfolio's scope, we did hold exposure to power semiconductor companies within our energy efficiency portfolio. This was one of the strongest quarters for these names in recent memory, as positive sentiment, the AI infrastructure buildout, and electrification demand helped to drive these names upwards. As the quarter wore on, valuations in semis looked increasingly stretched and the near-term thesis increasingly dependent on AI capex cycles rather than structural energy transition dynamics, we took profit and chose to exit most of those positions. Part of that capital was redeployed in our electric grid portfolio, including into EPC companies providing high voltage solutions to electric grids. As the world continues to electrify, the long-run case for these areas remains as compelling as ever, and we were pleased to add exposure at attractive valuations. We are also seeing a valuation opportunity opening up in our adaptation names and have been allocating to precision agriculture and timber.

As the world makes the transition to cleaner, renewable energy and economies grapple with electrification and climate change adaptation, we continue to believe this portfolio is well-positioned to benefit. The Climate Change portfolio continues to trade at a 20% discount to broader global equities, despite superior growth prospects, indicating substantial upside to come for patient capital.

Portfolio weights, as a percent of equity, for the positions mentioned were: Darling Ingredients (4.0%), Green Plains (2.3%), LG Chem (3.4%), and CATL (2.7%).

RISKS

Risks associated with investing in the Fund may include: (1) Focused Investment Risk: the Fund invests its assets in the securities of a limited number of issuers, and a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund invested in the securities of a larger number of issuers; (2) Market Risk - Equities: the market price of equities may decline due to factors affecting the issuer, its industries, or the economy and equity markets generally. Declines in stock market prices generally are likely to reduce the net asset value of the Fund's shares; and (3) Management and Operational Risk: the risk that GMO's investment techniques will fail to produce desired results, including annualized returns and annualized volatility. For a more complete discussion of these and other risks, please consult the Fund's Prospectus.

Inception Date: 14-Mar-18

Performance Returns: Performance for the year of inception is less than a full calendar year. Returns shown for periods greater than one year are on an annualized basis. To obtain performance information to the most recent month-end, visit www.gmo.com. **Performance data quoted represents past performance and is not indicative of future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance data may be lower or higher than the performance data provided herein.** Net of all fees and expenses after reimbursement by the Manager, but not transaction costs, if any. If certain expenses were not reimbursed, performance would be lower. Gross of fees, expenses and transaction costs, if any. If these fees, expenses and costs were included, performance would be lower. A dilution adjustment may be applied on a subscription or redemption of shares to reflect the costs of dealing in the Fund's assets. The return on investment in the Fund may increase or decrease as a result of currency fluctuations if an investor's investment is made in a currency other than that used in the past performance calculation. If the Fund holds assets in currencies other than the base currency of the Fund and/or you invest in a share class that is denominated in a different currency than the base currency of the Fund, subject to any hedging at share class or Fund level, the value of your investment may be impacted by changes in the relative prices of the relevant currencies. The use of financial derivative instruments by the Fund may result in increased gains or losses within the Fund. Formerly Climate Change Investment Fund. The portfolio is actively-managed, is not managed relative to a benchmark and uses an index for performance comparison purposes only and, where applicable, to compute a performance fee.
