### MAJOR PERFORMANCE DRIVERS

Over 2025, pessimism surrounding clean energy festered in the wake of Donald Trump's election, with widespread fear that the Inflation Reduction Act, President Biden's landmark energy legislation, would be repealed. We believed that the dismal sentiment had exacerbated substantial dislocations in some of the industries that we invest heavily in, and that the portfolio was poised to deliver strong returns. Valuations had fallen to such low levels that a sliver of good news likely would have driven a re-rating. As it turned out, good news arrived in quantities substantially larger than slivers. From a fundamental perspective, the companies we held generally reported very strong revenue and earnings growth over the course of the year. Areas of particular strength included solar, wind, geothermal, lithium, and automotive suppliers for the EV industry. The Climate Change portfolio was up for the fourth quarter and also for the year, significantly outperforming the MSCI ACWI Index over both time periods.

The market has started to recognize the burgeoning growth in energy demand and the challenges in meeting this demand. Data centers, industrial demand, EVs, heat pumps, and other factors are driving electricity demand growth at a pace not seen since the 1960s. With natural gas turbines sold out for the next few years, nuclear for an even longer timeframe, and new coal a non-starter in almost all countries, renewables are set to continue to dominate new power capacity additions. Renewables (primarily solar, wind, and storage) accounted for 94% of U.S. power capacity additions in 2024 and are expected to have registered a similar level for 2025. Renewables are cheap, clean, and rapidly deployable, an extremely competitive combination.

### RISKS

Risks associated with investing in the Fund may include: (1) Focused Investment Risk: the Fund invests its assets in the securities of a limited number of issuers, and a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund invested in the securities of a larger number of issuers; (2) Market Risk - Equities: the market price of equities may decline due to factors affecting the issuer, its industries, or the economy and equity markets generally. Declines in stock market prices generally are likely to reduce the net asset value of the Fund's shares; and (3) Management and Operational Risk: the risk that GMO's investment techniques will fail to produce desired results, including annualized returns and annualized volatility. For a more complete discussion of these and other risks, please consult the Fund's Prospectus.

Inception Date: 14-Mar-18

**Performance Returns:** Performance for the year of inception is less than a full calendar year. Returns shown for periods greater than one year are on an annualized basis. To obtain performance information to the most recent month-end, visit [www.gmo.com](http://www.gmo.com). **Performance data quoted represents past performance and is not indicative of future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance data may be lower or higher than the performance data provided herein.** Net of all fees and expenses after reimbursement by the Manager, but not transaction costs, if any. If certain expenses were not reimbursed, performance would be lower. Gross of fees, expenses and transaction costs, if any. If these fees, expenses and costs were included, performance would be lower. A dilution adjustment may be applied on a subscription or redemption of shares to reflect the costs of dealing in the Fund's assets. The return on investment in the Fund may increase or decrease as a result of currency fluctuations if an investor's investment is made in a currency other than that used in the past performance calculation. If the Fund holds assets in currencies other than the base currency of the Fund and/or you invest in a share class that is denominated in a different currency than the base currency of the Fund, subject to any hedging at share class or Fund level, the value of your investment may be impacted by changes in the relative prices of the relevant currencies. The use of financial derivative instruments by the Fund may result in increased gains or losses within the Fund. Formerly Climate Change Investment Fund. The portfolio is actively-managed, is not managed relative to a benchmark and uses an index for performance comparison purposes only and, where applicable, to compute a performance fee.

## MAJOR PERFORMANCE DRIVERS CONT.

Beyond renewables, our portfolio stands to benefit from growing electricity demand in a variety of ways. Our grids will need to be expanded and updated to handle a far greater load. Energy storage will increasingly be relied upon to help balance electricity supply and demand and help iron out the intermittency of renewables. Electricity price spikes as demand grows create tailwinds for energy efficiency efforts. Our positions in grid equipment, energy storage, copper, lithium, and energy efficiency stand to benefit from this activity.

Despite the plentiful good news, valuations continue to be subdued, with many companies in our universe trading at significant discounts to the broad equity market despite superior growth prospects. From its February 2021 peak through its April 2025 trough, the WilderHill Clean Energy Index dropped an astounding 89%. While the WilderHill rallied to finish the year strong, the index still sat 75% below its 2021 peak. When major market dislocations form, they typically take years to develop and years to correct. We suspect that last year's strong performance was the beginning of a rebound that will take years to play out.

Heading into 2025, we had substantial positions in solar, biofuels, and energy storage. Despite a great run in 2025, we still see significant upside in our top solar positions. Biofuels and energy storage delivered strong performance last year, but we largely believe these investments have yet to play out. Hence, we continue to maintain substantial exposure to all three industries. We also see significant electric grid and energy efficiency opportunities.

As the world makes the transition to cleaner, renewable energy and economies grapple with electrification and climate change adaptation, we continue to believe this portfolio is well-positioned to benefit. The Climate Change portfolio continues to trade at a discount to broader global equities, indicating substantial upside to come for patient capital.

# QUARTERLY INVESTMENT REVIEW

## PRODUCT OVERVIEW

The GMO Climate Change Transition Investment Fund seeks to generate high total return by investing primarily in equities of companies GMO believes are positioned to benefit, directly or indirectly, from efforts to curb or mitigate the long-term effects of global climate change, to address the environmental challenges presented by global climate change, or to help the world adapt to climate change through improved efficiency of resource consumption. We invest globally across the capitalization spectrum, which allows us to identify attractive investment opportunities wherever they be.

We are seeing exceptional opportunities for long-term investors abound in a world mobilizing to address climate change, and profitability associated with efforts to mitigate and adapt to climate change is largely independent of the global economy. Climate change investors can benefit from this unique, diversifying source of return, historically available at attractive valuations given the secular tailwinds of change.
