Data Source: GMO

MAJOR PERFORMANCE DRIVERS

– Top-down asset allocation significantly contributed to relative performance for the quarter as, within Developed Markets, the portfolio is biased away from the U.S. market, which badly underperformed. It was also a solid quarter for Emerging Markets.

– Security selection was also strongly positive in Developed Markets, as a combination of Quality and Value performed well.

Emerging market equities, with an emphasis on undervalued stocks, represented 18.7% of the total portfolio weight on average during the quarter. Our overweight position in Emerging Markets was helpful for relative performance as MSCI Emerging Markets returned 2.9% in USD terms, well ahead of the MSCI ACWI return of -1.3%. Security selection was negative; the portfolio underperformed with a return of 1.0%. An overweight position in TSMC (Taiwan Information Technology) featured in the top five biggest individual detractors from relative performance at the total portfolio level, while no Emerging Market names featured in the top five biggest individual contributors.

RISKS

Risks associated with investing in the Fund may include: (1) Market Risk - Equities: the market price of equities may decline due to factors affecting the issuer, its industries, or the economy and equity markets generally. Declines in stock market prices generally are likely to reduce the net asset value of the Fund's shares; (2) Management and Operational Risk: the risk that GMO's investment techniques will fail to produce desired results, including annualized returns and annualized volatility; and (3) Non-U.S. Investment Risk: the market prices of many non-U.S. securities (particularly of companies tied economically to emerging countries) fluctuate more than those of U.S. securities. Many non-U.S. markets (particularly emerging markets) are less stable, smaller, less liquid, and less regulated than U.S. markets, and the cost of trading in those markets often is higher than it is in U.S. markets. For a more complete discussion of these and other risks, please consult the Fund's Prospectus.

Inception Date: 20-Oct-14

Performance Returns: Performance for the year of inception is less than a full calendar year. Returns shown for periods greater than one year are on an annualized basis. To obtain performance information to the most recent month-end, visit www.gmo.com. **Performance data quoted represents past performance and is not indicative of future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance data may be lower or higher than the performance data provided herein.** Net of all fees and expenses after reimbursement by the Manager, but not transaction costs, if any. If certain expenses were not reimbursed, performance would be lower. Gross of fees, expenses and transaction costs, if any. If these fees, expenses and costs were included, performance would be lower. A dilution adjustment may be applied on a subscription or redemption of shares to reflect the costs of dealing in the Fund's assets. The return on investment in the Fund may increase or decrease as a result of currency fluctuations if an investor's investment is made in a currency other than that used in the past performance calculation. If the Fund holds assets in currencies other than the base currency of the Fund and/or you invest in a share class that is denominated in a different currency than the base currency of the Fund, subject to any hedging at share class or Fund level, the value of your investment may be impacted by changes in the relative prices of the relevant currencies. The use of financial derivative instruments by the Fund may result in increased gains or losses within the Fund. Returns include a substantial, one-time litigation settlement recovery received on December 16, 2024. This event contributed 1.00% to 2024 annual performance. Performance for other periods, including this date, was also positively impacted, sometimes materially. Without this recovery, performance would have been lower in both absolute terms and relative to the benchmark. Additional information is available upon request. The portfolio is actively-managed, is not managed relative to a benchmark and uses the Index for performance comparison purposes only and, where applicable, to compute a performance fee.

QUARTERLY INVESTMENT REVIEW

MAJOR PERFORMANCE DRIVERS CONT.

U.S. equities accounted for 38.4% of the total portfolio on average through the quarter, comprising 30.0% in broad U.S. equities and the remainder in Quality equities. This leaves the portfolio 27.4% underweight U.S. equities in total, and this had a positive impact on relative performance for the quarter as the MSCI USA index returned -4.6%, trailing MSCI ACWI. Security selection in the U.S. was solid as, in aggregate, our U.S. portfolio returned -3.3%. Underweight positions in Tesla (Consumer Discretionary), NVIDIA (Information Technology), and Broadcom (Information Technology) featured in the top five biggest individual contributors to relative performance for the quarter. On the flipside, underweight positions in AbbVie (Health Care) and Berkshire Hathaway (Financials) featured in the top five biggest individual detractors from relative performance at the total portfolio level.

Core European equities accounted for an average weight of 23.0% of the portfolio for the quarter, although the actual exposure is a little higher than this, allowing for the domicile of some of the Quality holdings. Our overweight position in Europe had a positive impact on relative performance as the MSCI Europe index returned 10.5%, well ahead of the MSCI ACWI return. Security selection within Europe was excellent, and the portfolio returned 18.4%. An overweight position in Banco de Sabadell (Spain Financials) and Deutsche Bank (Germany Financials) featured in the top five biggest individual contributors at the total portfolio level for the quarter, while no European stocks featured in the top five biggest individual detractors.

Japanese equities accounted for 8.9% of the total portfolio on average through the quarter. This is a moderate overweight position against the benchmark and had a small positive impact on relative performance as MSCI Japan outperformed modestly, returning 0.3% for the quarter. However, our stock selection in Japan was negative relative to this, delivering a -1.3% return. The portfolio held 7.4% on average in the remaining catch-all "other international." In aggregate, across allocation and stock selection, this had a small positive impact on relative performance for the period. An overweight position in Recruit Holdings (Japan Industrials) and Yangzijiang Shipbuilding (Singapore Industrials) featured in the top five biggest individual detractors at the total portfolio level.

Portfolio weights, as a percent of equity, for the positions mentioned were: TSMC (2.1%), Berkshire Hathaway (0.2%), Broadcom (0.0%), Tesla (0.0%), Banco de Sabadell (0.7%), Deutsche Bank (1.0%), NVIDIA (0.4%), Abbvie (0.0%), Yangzijiang Shipbuilding (0.4%), and Recruit Holdings (0.8%).

QUARTERLY INVESTMENT REVIEW

PRODUCT OVERVIEW

The philosophy that underlies all of GMO's Asset Allocation investment strategies is the belief that, at times and in the short term, the pricing of asset classes can deviate from true intrinsic value but mean reverts to appropriate valuation levels over a complete market cycle. Using GMO's 7-Year Asset Class Forecasts, the Fund seeks to allocate to areas of the global equity markets we believe are most attractively valued. Our approach combines the best of GMO's top-down Asset Allocation views and bottom-up equity research to identify mispricings at both the asset class and individual security levels. The Fund allocates to equity strategies that are actively managed by other GMO investment teams with expertise and experience in security selection within their respective markets.
