MAJOR PERFORMANCE DRIVERS

For the second quarter of 2025, MSCI ACWI returned 11.5%, with MSCI ACWI Value underperforming with a return of 5.8% and MSCI ACWI Growth outperforming with a return of 17.3%. The Equity Dislocation Investment Fund aims to be dollar and (broadly) beta neutral and, for the quarter, it had an average long exposure of 103.1% and an average short exposure of 103.4%. The long portfolio performed much better than MSCI ACWI Value, while the short portfolio was broadly in line with MSCI ACWI Growth. The net return for the Equity Dislocation Investment Fund was, therefore, well ahead of MSCI ACWI Value's -11.5% performance versus MSCI ACWI Growth for the quarter. Since inception, the Fund remains well ahead of ACWI Value minus ACWI Growth, and we are very pleased by the strong return profile. We believe that the opportunity set remains extremely compelling.

For the quarter, stock selection within countries across the long book detracted -260 bps relative to MSCI ACWI, driven by the U.S. (-210 bps), Japan (-60 bps), and Korea (-50 bps). Stock selection in the short book had a total negative impact against MSCI ACWI of -410 bps. The biggest detractors included the U.S. (-140 bps), Germany (-60 bps), China (-50 bps), and the UK (-50 bps). There were some modest country bets, although these are typically residuals driven by bottom-up security selection. The biggest net long position was a 1.8% long exposure to Denmark, and the biggest net short position was a 1.5% short exposure to the UK. In aggregate, country positions had a -10 bp impact on performance for the second quarter.

RISKS

Risks associated with investing in the Fund may include: (1) Market Risk - Equities: the market price of equities may decline due to factors affecting the issuer, its industries, or the economy and equity markets generally. Declines in stock market prices generally are likely to reduce the net asset value of the Fund's shares; (2) Short Investment Exposure Risk: a Fund will incur a loss as a result of a short sale if the price of the security, currency or other instrument increases between the date of the short sale and the date on which the Fund replaces the borrowed security, currency or other instrument. Conversely, the Fund will realize a gain if the price of the security, currency or other instrument declines between those dates. The amount of any gain will be decreased, and the amount of any loss increased, by the amount of the premium, dividends or interest the Fund may be required to pay in connection with a short sale. Short selling exposes a Fund to unlimited risk with respect to that security, currency or other instrument due to the lack of an upper limit on the price to which an investment can rise; and (3) Non-U.S. Investment Risk: the market prices of many non-U.S. securities (particularly of companies tied economically to emerging countries) fluctuate more than those of U.S. securities. Many non-U.S. markets (particularly emerging markets) are less stable, smaller, less liquid, and less regulated than U.S. markets, and the cost of trading in those markets often is higher than it is in U.S. markets. For a more complete discussion of these and other risks, please consult the Fund's Prospectus.

Inception Date: 10-May-21

Performance Returns: Performance for the year of inception is less than a full calendar year. Returns shown for periods greater than one year are on an annualized basis. To obtain performance information to the most recent month-end, visit www.gmo.com. **Performance data quoted represents past performance and is not indicative of future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance data may be lower or higher than the performance data provided herein.** Net of all fees and expenses after reimbursement by the Manager, but not transaction costs, if any. If certain expenses were not reimbursed, performance would be lower. Gross of fees, expenses and transaction costs, if any. If these fees, expenses and costs were included, performance would be lower. A dilution adjustment may be applied on a subscription or redemption of shares to reflect the costs of dealing in the Fund's assets. The return on investment in the Fund may increase or decrease as a result of currency fluctuations if an investor's investment is made in a currency other than that used in the past performance calculation. If the Fund holds assets in currencies other than the base currency of the Fund and/or you invest in a share class that is denominated in a different currency than the base currency of the Fund, subject to any hedging at share class or Fund level, the value of your investment may be impacted by changes in the relative prices of the relevant currencies. The use of financial derivative instruments by the Fund may result in increased gains or losses within the Fund. The portfolio is actively-managed, is not managed relative to a benchmark and uses an index for performance comparison purposes only and, where applicable, to compute a performance fee.

QUARTERLY INVESTMENT REVIEW

MAJOR PERFORMANCE DRIVERS CONT.

We are prepared to run modestly larger sector bets, up to about 10% net long or short, and the two biggest positions in this regard over the quarter were an 8.0% net long position in Financials and a -7.6% net short position in Industrials. Our sector positioning detracted -130 bps from performance. Stock selection across the long book was positive in four of the eleven sectors, negative in four sectors, and broadly flat in the other three sectors, with no material impact in aggregate. The main contributors were Financials (120 bps), Health Care (40 bps), and Energy (40 bps), while the detractors included Information Technology (-110 bps) and Industrials (-60 bps). Stock selection in the short book was negative in eight of the eleven sectors, positive in one sector, and broadly flat in the other two sectors, with an impact of -550 bps detracted from performance in aggregate. The biggest negative impacts included Health Care (-190 bps), Industrials (-140 bps), and Consumer Discretionary (-70 bps).

All of the top five biggest contributors at the total portfolio level were long positions including Micron Technology (U.S. Information Technology), Hewlett Packard (U.S. Information Technology), Bank Leumi (Israel Financials), Telecom Italia (Italy Communication Services), and Synchrony (U.S. Financials). On the flipside, none of the top five biggest detractors at the total portfolio level was a long position.

QUARTERLY INVESTMENT REVIEW

PRODUCT OVERVIEW

The GMO Equity Dislocation Investment Fund seeks high total return. It aims to own attractively valued equities while correspondingly shorting equities where we believe that valuations are reflective of implausible growth expectations. Currently, the Fund is long global Value, short global Growth, to take advantage of the exceptionally wide valuation spread between Value and Growth.

The eligible universe for both the long and short side spans the market capitalization spectrum and includes both developed and emerging markets. Utilizing GMO's proprietary Price to Fair Value model to actively select the cheapest and most expensive stocks, the portfolio is diversified across sectors, countries, and regions and is intended to be approximately beta neutral.
