

GMO Global Equity Allocation Series Fund R6

December 31, 2018

FUND OVERVIEW

The GMO Global Equity Allocation Series Fund (the "Fund") seeks total return greater than that of the MSCI All Country World Index.

The Fund uses multi-year forecasts of returns among asset classes to build a portfolio that primarily provides exposure to non-U.S. and U.S. equity markets.

The Fund invests substantially all of its assets in GMO Global Equity Allocation Fund ("GEAF"), which invests primarily in shares of other funds managed by GMO. The Fund's investment objective and principal investment strategies, therefore, are substantially similar to those of GEAF. References to the Fund may refer to actions undertaken by the Fund or GEAF.

METHODOLOGY

The Fund's methodology, driven by the investment principle that valuations revert over time to their fair value, determines allocations based on multi-year forecasts of relative value among the major equity asset classes, together with an assessment of the relative risks of such asset classes. The process analyzes country, sector, and individual security levels based on factors and characteristics such as aggregated price/book, dividend yield, cash earnings, price/cyclically-adjusted earnings, inflation, interest rates, etc. The forecasts are then used to select the underlying portfolios in which to invest and to decide how much to invest in each.

The underlying portfolios in which the Fund invests are actively managed, and equities are bought and sold according to GMO's evaluation of companies' published financial information and corporate behavior, and securities' prices. GMO uses a combination of investment methods to evaluate individual equities or a group of equities based on the ratio of their price relative to historical financial information and forecasted financial information, such as book value, cash flow, and earnings, and a comparison of these ratios to industry or market averages or to their own history.

PORTFOLIO CONSTRUCTION

The Fund invests in other GMO-managed funds or directly in securities and derivatives. Depending upon the current valuation assessment of the global marketplace, the Fund may own different proportions of underlying portfolios at different times. The Fund attempts to rebalance when the investment outlook has changed, when cash flows occur, or when there has been a significant change in market valuation levels.

Risks associated with investing in the Fund may include those as follows. (1) Market Risk – Equities: The market price of equities may decline due to factors affecting the issuing companies, their industries, or the economy and equity markets generally. Declines in stock market prices generally are likely to reduce the net asset value of the Fund's shares. (2) Management and Operational Risk: The risk that GMO's investment techniques will fail to produce desired results. (3) Non-U.S. Investment Risk: The market prices of many non-U.S. securities fluctuate more than those of U.S. securities. Many non-U.S. markets are less stable, smaller, less liquid, and less regulated than U.S. markets, and the cost of trading in those markets often is higher than it is in U.S. markets. For a more complete discussion of these risks and others, please consult the Fund's prospectus.

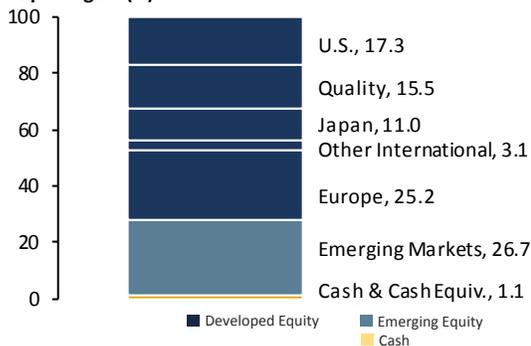

*Refers to the inception date of the GMO Global Equity Allocation Fund. Class R6 shares were first offered on January 1, 2012. GMO Global Equity Allocation Series Fund is a feeder fund investing substantially all of its assets in shares of a corresponding master fund (i.e., a corresponding GMO Trust fund). Performance data quoted for GMO Global Equity Allocation Series Fund reflects the performance data of the corresponding GMO Trust master fund re-stated to reflect the fees and expenses associated with GMO Global Equity Allocation Series Fund.

An investor should consider the fund's investment objectives, risks, charges and expenses before investing. This and other important information can be found in the fund's prospectus. To obtain a prospectus please visit www.gmo.com. Read the prospectus carefully before investing.

Performance data quoted represents past performance and is not indicative of future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance data may be lower or higher than the performance data provided herein. To obtain performance information to the most recent month-end, visit www.gmo.com.

Performance of the feeder may differ from the master fund due to various factors including, but not limited to, expected higher cash levels in the feeder fund, the timing of feeder investments in or out of the corresponding master fund, and the impact of purchase and/or redemption fees (if applicable) charged by the master fund.

Gross Expense Ratio Class R6 0.68% reflects the Fund's total annual operating expense ratio from the Fund's most recent prospectus.

Net Expense Ratio Class R6 0.67% reflects the reduction of expenses from fee reimbursements. The fee reimbursements will continue until at least September 30, 2019. Elimination of this reimbursement will result in higher fees and lower performance.

The MSCI ACWI (All Country World Index) (MSCI Standard Index Series) is an independently maintained and widely published index comprised of global developed and emerging markets.

The MSCI ACWI (All Country World Index) + is an internally maintained composite benchmark computed by the Manager, comprised of (i) the GMO Global Equity Index, a composite benchmark computed by the Manager that consists of the S&P 500 Index (75%) and the MSCI ACWI ex-USA (MSCI Standard Index Series) (25%) through 5/31/2008 and (ii) the MSCI ACWI (MSCI Standard Index Series) thereafter.
