GMO Quality Investment Fund - GBP Class (ISIN: IE00BJ56QR44) a sub-fund of GMO Funds plc

Objectives and Investment Policy

The fund aims to achieve positive returns.

The fund invests primarily in shares and related securities of companies anywhere in the world which the investment manager believes to be of high quality.

In assessing a company's quality, the investment manager may consider several factors, including in particular, high profitability, stable profitability and low leverage.

The fund may make tactical allocations of up to 20% of the fund's net asset value to investments in cash and debt securities rated at least investment grade by a rating agency or rated lower or unrated but deemed by the investment manager to be of at least investment grade. Such debt securities may be government or corporate securities and may be fixed or floating rate.

The fund may also invest in other investment funds to pursue the investment objective of the fund.

The fund is actively managed and does not manage the fund to, or control the fund's risk relative to, any securities index or securities benchmark. The fund uses the S&P 500 Index, MSCI World Index, Russell 1000 Growth Index, Russell 1000 Value Index, FAANG Stocks Index for performance comparison purposes only (together, the "Comparator

Indices"). Although the fund's securities may be components of the Comparator Indices, the fund's investment manager may or may not invest in securities not included in the Comparator Indices.

The fund may use instruments whose value is determined by changes in the value of the underlying assets they represent (derivatives). Derivatives may be used for the reduction of risk and cost and the generation of additional capital or income.

For more information about the investment policy, see "Investment Objectives and Policies of the Funds" in the fund's prospectus available at www.gmo.com.

You may sell your shares usually on each business day (generally a day on which banks in Dublin and London and the New York Stock Exchange are open) by sending your request to State Street Fund Services (Ireland) Limited before 2.00 pm (Irish time) on the preceding business day.

Income is reinvested into the fund.

Recommendation: this fund may not be appropriate for investors who plan to withdraw their money within the short term.

Risk and Reward Profile

The risk category is based on simulated and historical data and may not be a reliable indicator of the future risk profile of the fund. The risk category shown is not guaranteed and may change over time.

The numerical scale is complex. For example, 2 is not twice as risky as 1. The gap between 1 and 2 might not be the same as the gap between 5 and 6. A category 1 fund is not a risk-free investment – the risk of losing your money may be small, but the chance of making gains is also limited.

The fund is in category 6 because it invests in shares in companies worldwide and so historically there has been a greater fluctuation in the price of the shares of the fund than other funds (such as money market funds).

Risks materially relevant to the fund which may not be adequately captured by the indicator:

The fund may not achieve its investment objective and the value of shares in the fund may fall.

The market value of a share may decline for reasons directly related to the issuing company, such as management performance, borrowing levels and reduced demand for its goods or services.

Operational risk can result from inadequate procedures and controls, human error and system failures by a service provider to the fund.

Focusing investments in a limited number of countries, sectors or companies or in industries with high positive correlations to one another (i.e., tend to move in the same direction) creates additional risk. The fund invests its assets in the securities of a limited number of issuers, and a decline in the market value of a particular security held by the fund may affect the fund's performance more than if the fund invested in the securities of a larger number of issuers.

Fluctuations in exchange rates can adversely affect the market value of the fund's foreign currency holdings and investments denominated in foreign currencies.

The use of derivatives involves the risk that their value may not move as expected relative to the value of the relevant underlying assets, rates or indices. Derivatives also present other risks, including market risk, liquidity risk, currency risk and counterparty risk.

The fund runs the risk that the counterparty to an OTC derivatives contract (i.e. one that's not traded on an exchange) or a borrower of the fund's securities will be unable or unwilling to make timely settlement payments or otherwise honour its obligations.

See also the description of the risks applicable to the fund in the section titled "Risk Factors" in the fund's prospectus.
