MAJOR PERFORMANCE DRIVERS

The GMO Multi-Asset Credit benchmark (equal-weighted index comprised of the Bloomberg U.S. High Yield, Bloomberg U.S. Corporate, Bloomberg U.S. Securitized, and J.P. Morgan EMBI Global Diversified indices) returned 1.8% for the period. Spreads over Treasury tightened across sectors, while the front-end Treasury rates fell with 2-year Treasury yields ending at 3.47%; however, the long-end rates sold off with the 10-year Treasury rate ending 2 bps higher at 4.17%, contributing positively to interest rate returns. In corporate credit markets High Yield (HY) outperformed Investment Grade (IG) on both excess returns, 0.2% vs 0.0%, and total return basis, 1.6% vs. 0.7%, respectively. Emerging Debt generated a strong excess return of 2.4%, outperforming both HY (0.2%) and U.S. Securitized (0.6%) while also leading the way in total returns space with 3.3%. U.S. Securitized Credit had a strong quarter, outperforming High Yield by 0.4% (total return) and 0.4% (excess return), supported by significant tightening in mortgage spreads and falling front-end rates.

The portfolio outperformed the benchmark, primarily due to robust credit selection. Negative contributions from credit allocation and duration positioning were unable to fully offset those gains.

Within the credit allocation category, underweight position in Emerging Debt detracted the most, followed by defensive positioning via U.S. Treasuries and credit hedges. Conversely, underweight positions in Investment Grade and High Yield, and allocation to credit momentum contributed positively; however, not enough to offset allocation losses elsewhere.

Inception Date: 21-May-25

Performance for the year of inception is less than a full calendar year. Returns shown for periods greater than one year are on an annualized basis.

Risks: Risks associated with investing in the Fund may include: (1) Credit Risk: the risk that the issuer or guarantor of a fixed income investment or the obligor of an obligation underlying an asset-backed security will be unable or unwilling to satisfy its obligation to pay principal and interest or otherwise to honor its obligations in a timely manner; (2) Market Risk-Asset-Backed Securities Risk: the market price of asset-backed securities, like that of other fixed income investments with complex structures, can decline for a variety of reasons, including investor uncertainty about their credit quality and the reliability of their payment streams. Payment streams associated with asset-backed securities held by the Fund depend on many factors (e.g., the cash flow generated by the assets backing the securities, deal structure, and creditworthiness of any credit-support provider), and a problem in any of these factors can lead to a reduction in the payment stream GMO expected the Fund to receive when the Fund purchased the asset-backed security; (3) Illiquidity Risk: low trading volume, lack of a market maker, large position size, or legal restrictions may limit or prevent the Fund from selling particular securities or closing derivative positions at desirable prices; and (4) Pooled Investment Vehicles Risk: Investments by a Fund in pooled investment vehicles may involve additional and/or a layering of fees, expenses, changes and other costs (including without limitation, purchase premiums and redemption fees, if any). For a more complete discussion of these and other risks, please consult the Fund's Prospectus. **Performance Returns:** Annualized Returns may include the impact of purchase premiums and redemption fees. The GMO Trust funds are distributed in the United States by Funds Distributor LLC. GMO and Funds Distributor LLC are not affiliated.

Net Expense Ratio: 0.01%; Gross Expense Ratio: 0.01% Net Expense Ratio reflects the reduction of expenses from fee reimbursements. The fee reimbursements will continue until at least June 30, 2026. Elimination of this reimbursement will result in higher fees and lower performance. Gross Expense Ratio is equal to the Funds Total Annual Operating Expenses set forth in the Funds most recent prospectus dated June 30, 2025.

QUARTERLY INVESTMENT REVIEW

MAJOR PERFORMANCE DRIVERS CONT.

Duration positioning contributed negatively over the period. The portfolio targets lower interest rate duration compared to the blended benchmark, which results in a negative impact on relative returns when Treasury rates rally. The blended benchmark duration averaged 5.4 years during the period vs. the portfolio's average of 3.7 years, generating a small negative return contribution.

Within the credit selection category, GMO Emerging Debt added value, driven by overweight positions in lower-quality sovereigns such as Venezuela, Ecuador, and Argentina. Security selection in Venezuela, Mexico, and Argentina was positive, while positions in Turkey and Egypt detracted. In addition, GMO Structured Products exposure contributed positively to relative returns as selection in non-Agency MBS, Student loans, and CMBS outperformed the benchmark. Lastly, credit selection in the GMO High Yield portfolio was additive, supported by the overweight in Quality (via BB bonds) and Carry factors, which outperformed.

During the quarter, the portfolio reduced effective exposure to Emerging Debt by increasing the beta hedge via a credit default index swap in late December and increased Corporate IG positions when the spreads widened in early November. We also added to our tactical short position in leveraged loans via total return swap (TRS). Additionally, we monetized gains from our Agency MBS positions and reduced risk as mortgage spreads tightened over the period. We continue to maintain a conservative posture with an underweight to riskier credit.

At quarter end, approximately 65% of the portfolio was rated Investment Grade (BBB or higher), 45% of the portfolio was invested in Structured Products, 5.1% in Emerging Debt (including CDX hedge), 12.5% in High Yield, 10.0% in Investment Grade Corporates, 7.6% in Agency MBS, 5% in Credit Momentum positions, and a 5% short position in leveraged loans via TRS, as well as 6.2% in U.S. Treasuries and ultra short income securities.

QUARTERLY INVESTMENT REVIEW

PRODUCT OVERVIEW

The GMO Multi-Asset Credit Fund seeks total return and capital appreciation aiming to maximize alpha potential by harvesting what we identify as the most attractively priced credit risk premia through a dynamic allocation process across the credit spectrum. Our team utilizes a robust research framework that combines top-down and bottom-up analysis along with fundamental and quantitative techniques across various fixed income markets, including Emerging Country Debt, Structured Products, High Yield, Investment Grade, Loans, and Mortgages. Our investment process places a strong emphasis on relative value analysis, allowing us to employ a benchmark agnostic investment style that we believe sets us apart. We have the agility to capitalize on fleeting relative value opportunities across fixed income markets, ensuring we stay ahead of market dynamics. Our Fund attempts to maintain a balanced approach between risk and return by focusing on capital preservation during market downturns while looking to avoid premium priced securities in overvalued markets.

IMPORTANT INFORMATION

An investor should consider the fund's investment objectives, risks, charges and expenses before investing. This and other important information can be found in the funds prospectus. To obtain a prospectus please visit www.gmo.com. Read the prospectus carefully before investing.

Benchmark(s): The Multi-Asset Credit Blended Benchmark is an internally maintained benchmark computed by GMO, comprised of (i) 25% Bloomberg U.S. Securitized Index, (ii) 25% Bloomberg U.S. Corporate High Yield Index, (iii) 25% Bloomberg U.S. Corporate Index, and (iv) 25% J.P. Morgan EMBI Global Diversified.

The GMO Trust funds are distributed in the United States by Funds Distributor LLC. GMO and Funds Distributor LLC are not affiliated.
