

SYSTEMATIC GLOBAL MACRO STRATEGY

The Opportunity

Most long only asset valuations are stretched to the point where expected longer-term returns are approaching zero. With lower expected returns from beta, the role of alpha becomes more important. The use of alternatives has become more prominent as investors seek to diversify away from beta. This has given rise to the use of hedge funds and liquid alternatives, which are designed to provide return series with low correlations to the broad market – a feature that is particularly compelling in a low return environment.

The GMO Solution

The GMO Systematic Global Macro Strategy is designed to deliver absolute returns by managing long and short exposures in global equity, fixed income, currency, and commodity markets.

STARTING WITH LONG-TERM VALUE

- We believe that value opportunities can be systematically identified. GMO leverages its extensive experience in producing long-term expected return forecasts and does so for every market in our universe.

COMPLEMENTING VALUE WITH SENTIMENT

- Using a variety of shorter-term indicators, we model sentiment to help time our value positions. While we want to buy cheap and sell expensive, we also want to do this at the right time. Don't buy an asset when it's cheap and falling – buy it when it's cheap and turning.

RISK CONTROL AND LOW LEVERAGE

- The GMO Systematic Global Macro team takes a highly disciplined approach to risk management. We use a variety of models to analyze the portfolio and ensure that we are not assuming excessive risk. Further, we don't employ extensive leverage. While leverage can amplify gains, it can also amplify losses – an outcome we actively aim to avoid.

STRONG DIVERSIFICATION

- Historically, our approach has provided strong diversification benefits, with a track record of low correlation to traditional asset class benchmarks, absolute return indices, and hedge funds.

GMO Systematic Global Macro Strategy

| | |
|----------------------------|--|
| Markets Traded | 24 Equity Markets, 6 Fixed Income Markets, 10 Currencies, 17 Commodities |
| Leverage | 400% Gross (Long + Short) |
| Liquidity Profile | Diversified Group of Liquid Markets |
| Instrument Volatility | Historically between 4% and 70% p.a. |
| Target Return (Gross) | 10% |
| Target Strategy Volatility | 10-15% p.a. |

The Client Fit

For investors seeking to diversify away from beta, the GMO Systematic Global Macro Strategy has delivered strong excess returns with a low correlation to conventional asset classes and macro hedge funds since its inception in 2002.

Who We Are

Founded in 1977, GMO is a private partnership whose sole business is investment management. The firm manages global portfolios with offices and clients around the world. Investment offerings include equity, fixed income, multi-asset class, and alternative strategies. GMO is known for blended fundamental and quantitative investment research expertise and a long-term orientation toward value opportunities.

The Team

The Systematic Global Macro team has been together at GMO since 1999. The team's tenure and experience has enabled our investment philosophies and processes to remain consistent, while our commitment to investment research facilitates the application of desired enhancements. The Systematic Global Macro Strategy is managed using a team approach to ensure consistency within our investment management process. Research is conducted on an ongoing basis by all team members to ensure the models used are as strong as possible. The Head of Systematic Global Macro Asset Allocation, Jason Halliwell, retains final decision-making authority.

RISK

Risks associated with investing in the Strategy may include Derivative Instruments Risks, Equities Risks, Currency Risks, Commodities Risks, and Fixed Income Risks.
