GMO INTERNATIONAL VALUE ETF

INVESTMENT OBJECTIVE

To generate total return by investing primarily in international equities

WHY GMO VALUE

- Top-down perspective applied to find mispriced equity groups
- GMO models build more realistic company valuations than reported book value
- Quality and growth prospects inform a unique projection for each company

WHY NOW? NON-U.S. DEEP VALUE IS RELATIVELY CHEAP

As of 6/30/2025 | Source: GMO | Stock valuations are calculated on a blend of Price/Sales, Price/Gross Profit, Price/Book, and Price/Economic Book. U.S. and MSCI World ex-U.S. valuation groups are based on the top 1,000 U.S. stocks by market capitalization and the constituents of the MSCI World ex-U.S. Index, respectively, each excluding the smallest names per the Asset Allocation team's investable universe thresholds. All groups have the same country exposure as the universe. MSCI data may not be reproduced or used for any other purpose. MSCI provides no warranties, has not prepared or approved this report, and has no liability hereunder. Please visit <https://www.gmo.com/americas/benchmark-disclaimers/> to review the complete benchmark disclaimer notice.

ABOUT GMO

An investor should carefully consider the fund's investment objectives, risks, charges and expenses before investing. This and other important information can be found in the fund's prospectus. To obtain a prospectus please visit www.gmo.com. Read the prospectus or summary prospectus carefully before investing.

Risks associated with investing in the Fund may include: (1) Market Risk - Equities: The market price of equities may decline due to factors affecting the issuer, its industries, or the economy and equity markets generally. Declines in stock market prices generally are likely to reduce the net asset value of the Fund's shares. (2) Management and Operational Risk: The risk that GMO's investment techniques will fail to produce desired results, including annualized returns and annualized volatility. (3) Non-U.S. Investment Risk: The market prices of many non-U.S. securities (particularly of companies tied economically to emerging countries) fluctuate more than those of U.S. securities. Many non-U.S. markets (particularly emerging markets) are less stable, smaller, less liquid, and less regulated than U.S. markets, and the cost of trading in those markets often is higher than it is in U.S. markets. For a more complete discussion of these risks and others, please consult the Fund's Prospectus. The GMO ETF's are distributed in the United States by Foreside Fund Services LLC. GMO and Foreside Fund Services LLC are not affiliated.

GMO INTERNATIONAL VALUE

OVERVIEW

The GMO International Value ETF seeks to generate total return by investing primarily in international equities.

The GMO International Value ETF aims to profit from our Asset Allocation team's top-down insights as to the most attractively valued segment of developed markets outside the U.S. Currently, the team finds developed, non-U.S. "deep value" (cheapest 20%) stocks to be unusually cheap relative to their own history. This actively managed ETF concentrates exposure in the deep value segment by focusing on the international stocks that GMO's Systematic Equity team identifies as the most undervalued, using proprietary valuation models because we believe that relying on reported financials and index definitions of value may lead investors to misjudge the opportunity.

Performance data quoted represents past performance and is not indicative of future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance data may be lower or higher than the performance data provided herein. To obtain performance information to the most recent month-end, visit www.gmo.com. Exchange Traded Funds (ETFs) are bought and sold through exchange trading at market price (not NAV), and are not individually redeemed from the fund. Shares may trade at a premium or discount to their NAV in the secondary market. Brokerage commissions will reduce returns. The portfolio is actively-managed, is not managed relative to a benchmark and uses an index for performance comparison purposes only and, where applicable, to compute a performance fee.

GLOSSARY

Alpha is a measure of risk-adjusted return. Beta is a measure of a portfolio's sensitivity to the market. R-Squared is a measure of how well a portfolio tracks the market. Sharpe Ratio is the return over the risk free rate per unit of risk. Std Deviation is a measure of the volatility of a portfolio.

Sector Exposures: The Global Industry Classification Standard (GICS) is the exclusive intellectual property of MSCI Inc. (MSCI) and Standard & Poor's, a division of The McGraw-Hill Companies, Inc. (S&P). Neither MSCI, S&P, nor any third party makes any representations or warranties, express or implied, with respect to GICS or the results to be obtained by the use thereof, and expressly disclaim all warranties, including of merchantability and fitness for a particular purpose. Neither MSCI, S&P, nor any third party shall have any liability for any damages of any kind relating to the use of GICS. **Top Holdings:** Portfolio holdings are percent of equity. Where applicable, the top holdings are derived by looking through to the underlying funds in which the asset allocation funds invest and, where appropriate, individual security positions are aggregated. They are subject to change and should not be considered a recommendation to buy individual securities.
