Major Performance Drivers

The fourth quarter ended with yet another reversal in equity and bond markets, closing out a year where the only constant was change. Bond yields fell after the U.S. Federal Reserve indicated the rate hiking cycle is likely to have peaked. Equity markets rose significantly on “soft landing” sentiment and those sectors with a perceived high delta to rate cuts rose even higher. Across commodity markets, oil prices fell despite the outbreak of conflict in Gaza, and copper prices rose as supply concerns increased. Against this backdrop, the Resources portfolio was up for the quarter, outperforming the MSCI Commodity Producers index, which was flat.

Our Energy segment, at just over half the portfolio, detracted in absolute terms but held up well versus broader energy markets as security selection within Fossil Fuels continued to be strong while our off benchmark allocation to Clean Energy was additive. Our focus on valuation opportunities within the Fossil Fuel sector has long steered us away from the richly valued U.S. majors like Exxon and Chevron, and toward names in emerging markets like Petrobras or in Europe like Galp and Eni Spa. Last year that was a headwind for performance but this quarter and over the long term, focusing on valuations has led to much better return outcomes. Within Clean Energy, the better quarter resulted from a significant reversal in sentiment reflecting a potential peak in U.S. interest rates and greater clarity on government incentives. We have been adding to a broad basket of higher quality clean energy companies over the past six months, anticipating a reversal of some of the cyclical trends and poor sentiment that have driven many otherwise structurally strong companies to significantly sell off.

Our Industrial Metals segment delivered strong absolute returns and our continued decision to have a significant allocation (>30%) to the space was rewarded. Within the segment, our long-held allocation to copper, a key energy transition metal, faced some challenges this quarter. The closure of First Quantum’s Panama operations and the reduction of Anglo American’s supply means copper is now looking increasingly like a pinch point in many clean technology and industrial supply chains. Those remaining suppliers, including some held in this portfolio like Ivanhoe Mines, are expected to benefit.

The Agriculture segment had tougher performance this quarter but has been an area we have been trimming after strong returns in previous quarters.

The long-term supply/demand dynamics in natural resource markets favor high and rising prices. But the deeply discounted valuations still available in some parts of this sector mean that investors don’t need commodity prices to rise in order to expect strong returns. Flat commodity prices could still lead to a healthy return from a resource equity portfolio. In addition, valuations within the Clean Energy sector are now increasingly attractive.

Portfolio weights, as a percent of equity, for the positions mentioned were: Galp (3.2%), Petrobras (3.6%), Eni Spa (1.8%), First Quantum (0.6%), and Ivanhoe Mines (4.2%).

Inception Date: 28-Dec-11

Risks: Risks associated with investing in the Fund may include: (1) Focused Investment Risk: The Fund invests its assets in the securities of a limited number of issuers, and a decline in the market price of a particular security held by the Fund may affect the Fund’s performance more than if the Fund invested in the securities of a larger number of issuers. (2) Commodities Risk: Commodity prices can be extremely volatile, and exposure to commodities can cause the value of the Fund’s shares to decline or fluctuate more than if the Fund had a broader range of investments. (3) Market Risk - Equities: The market price of an equity may decline due to factors affecting the issuer or its industry or the economy and equity markets generally. Declines in stock market prices generally are likely to reduce the net asset value of the Fund’s shares. For a more complete discussion of these risks and others, please consult the Fund’s prospectus. Annualized Returns may include the impact of purchase premiums and redemption fees. Returns shown for periods greater than one year are on an annualized basis. To obtain performance information to the most recent month-end, visit www.gmo.com.

If certain expenses were not reimbursed, performance would be lower. Transaction costs, if any, are paid to the fund to offset the cost of portfolio transactions to invest or raise cash. **Net Expense Ratio: 0.72%; Gross Expense Ratio: 0.72% Net Expense Ratio reflects the reduction of expenses from fee reimbursements. The fee reimbursements will continue until at least June 30, 2024. Elimination of this reimbursement will result in higher fees and lower performance. Gross Expense Ratio is equal to the Funds Total Annual Operating Expenses set forth in the Funds most recent prospectus dated June 30, 2023.**

Performance data quoted represents past performance and is not indicative of future results. The investment return and principal value of an investment will fluctuate so that an investor’s shares, when redeemed, may be worth more or less than their original cost. Current performance data may be lower or higher than the performance data provided herein. The portfolio is not managed relative to a benchmark. QUARTERLY INVESTMENT REVIEW

PRODUCT OVERVIEW

The GMO Resources Fund seeks to generate total return by investing in equities in the natural resources sector. The Fund's benchmark is the MSCI All Country World Commodities Index.

GMO's Focused Equity team believes that the increasing demand for natural resources, driven primarily by population growth in and industrialization of emerging markets, coupled with the limited supply of these resources, favors an upward trend in resource prices over time. The Fund seeks to invest in the securities of companies that we believe will benefit from this expected long-term rise in natural resource prices.

IMPORTANT INFORMATION

Comparator Index(es): The MSCI ACWI (All Country World) Commodity Producers Index (MSCI Standard Index Series, net of withholding tax) is an independently maintained and widely published index comprised of listed large and mid capitalization commodity producers within the global developed and emerging markets. MSCI data may not be reproduced or used for any other purpose. MSCI provides no warranties, has not prepared or approved this report, and has no liability hereunder.

An investor should consider the fund's investment objectives, risks, charges and expenses before investing. This and other important information can be found in the funds prospectus. To obtain a prospectus please visit www.gmo.com. Read the prospectus carefully before investing.

The GMO Trust funds are distributed in the United States by Funds Distributor LLC. GMO and Funds Distributor LLC are not affiliated.
