KEY PRODUCT FEATURES

WHAT ARE YOU INVESTING IN?

- You are investing in a collective asset management vehicle constituted in Ireland that seeks total return.
- There is currently no intention to declare dividends in respect of any classes of Shares in the Fund. All income and capital gains of the Fund will be reinvested. The directors of the ICAV may, upon advance notice to shareholders of the Fund, decide to change the dividend policy of, and declare a dividend in respect of, any class of Shares in the Fund. Where such dividend is declared, it may be paid out of dividend and net interest income earned plus net realised and net unrealised capital gains after the deduction of expenses in that accounting period attributable to the relevant class. **Shareholders should note that a payment of dividend out of capital represents a return of the amount invested and a reduction of the portion of net assets allocated to the Fund or a class.**

Refer to Appendix 2 of the Singapore Prospectus for further information on features of the product.

Investment Strategy

- The Fund seeks total return by investing in equities of companies in the natural resources sector, namely companies that own, produce, refine, process, transport, and market natural resources and companies that

<p>provide related equipment, infrastructure, and services. Given the expected growth and industrialisation of emerging countries, the Investment Adviser believes that global demand for many natural resources will increase and, given the limited supply of many natural resources, that prices of these natural resources will increase over a long time period. In managing the Fund, the Investment Adviser seeks to invest in the securities of companies that it believes will benefit from, and avoid companies it believes will be adversely affected by, this expected long-term increase in natural resource prices.</p> <ul style="list-style-type: none"> • The Fund may use financial derivative instruments for purposes of investment and efficient portfolio management. 	<p>further information on the investment strategy of the product.</p>
Parties Involved	
<p>WHO ARE YOU INVESTING WITH?</p> <ul style="list-style-type: none"> • The Fund is a sub-fund of the Irish constituted GMO Investments ICAV (the “ICAV”). • The ICAV is a collective asset-management vehicle with segregated liability between sub-funds constituted. • The Manager is Waystone Management Company (IE) Limited. • The Investment Adviser is Grantham, Mayo, Van Otterloo & Co. LLC • The Depositary is State Street Custodial Services (Ireland) Limited. 	<p>Refer to the “Management and Administration of the ICAV”, “Depositary” and “Other Material Information” sections of the Singapore Prospectus for further information on the role and responsibilities of these entities and what happens if they become insolvent.</p>
KEY RISKS	
<p>WHAT ARE THE KEY RISKS OF THIS INVESTMENT? The value of the Fund and its dividends (if any) may rise or fall. You may lose all of your initial principal investment. These risk factors may cause you to lose some or all of your investment and your principal may be at risk.</p>	<p>Refer to the “Risks” section of the Singapore Prospectus for further information on risks of the product.</p>
Market and Credit Risks	
<ul style="list-style-type: none"> • Market disruption and geopolitical risk – The Fund is subject to the risk that geopolitical and other events (e.g., wars and terrorism) will disrupt securities markets and adversely affect global economies and markets, thereby reducing the value of the Fund’s investments. • Market Risk - Equities – As the Fund invests in equities, it runs the risk that the market price of an equity will decline. That decline may be attributable to factors affecting the issuer, a particular industry, or from general market conditions not specifically related to a company or industry. • Currency risk – Currency risk is the risk that fluctuations in exchange rates will adversely affect the market value of the Fund’s investments. Currency risk includes the risk that the currencies in which a Fund’s investments are traded, in which the Fund receives income, or in which the Fund has taken a position, will decline in value or the risk that the currency to which the Fund has obtained exposure through hedging declines in value relative to the currency being hedged. • Counterparty risk – As the Fund enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or OTC derivatives contracts, or lends its portfolio securities or allow an OTC derivative counterparty to retain possession of collateral, it runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honour its obligations. 	

Liquidity Risks									
<ul style="list-style-type: none"> • The Fund is not listed in Singapore and you can repurchase your shares only on Dealing Days as described in the Singapore Prospectus. • You may not be able to repurchase on a Dealing Day if a repurchase limit is imposed or if repurchases are suspended – There may be a 10% limit on the number of Shares that can be repurchased on any Dealing Day and the ICAV may temporarily suspend repurchases during certain circumstances. • You are exposed to the liquidity risk of the Fund's investments – Low trading volume, lack of a market maker, large position size, or legal restrictions may limit or prevent the Fund from selling particular securities or closing derivative positions at desirable prices. 									
Product-Specific Risks									
<ul style="list-style-type: none"> • Derivatives risk - The Fund may invest in derivatives, which are financial contracts whose value depends on, or is derived from, the value of underlying assets (such as securities, commodities or currencies), reference rates (such as interest rates, currency exchange rates or inflation rates), or indices. Derivatives involve the risk that their value may not change as expected relative to changes in the value of the assets, rates, or indices they are designed to track. • Leveraging risk - The use of traditional borrowing, reverse repurchase agreements and other derivatives and securities lending creates leverage. Leverage increases the Fund's losses when the value of its investments (including derivatives) declines. • Focused investment risk - Investments focused in asset classes, countries, regions, sectors, industries, currencies or issuers (or in sectors within a country or region) that are subject to the same or similar risk factors and investments whose prices are closely correlated are subject to greater overall risk than investments that are more diversified or whose prices are not as closely correlated. • Small company risk - Companies with smaller market capitalisations tend to have limited product lines, markets, or financial resources, lack the competitive strength of larger companies, have inexperienced managers or depend on a few key employees. In addition, their securities often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations. • Sustainability risk - The Fund may be exposed to certain sustainability risks. A sustainability risk is an ESG event or condition that, if it occurs, could case an actual or a potential material negative impact on the value of an investment.
