Value Add	-1.10	-1.59	-1.08	+1.41	-	-	-4.48

MAJOR PERFORMANCE DRIVERS

Global equity markets were up in the second quarter of 2025, with the strongest performance from Emerging Markets, despite continued trade policy and geopolitical uncertainties. Within Emerging Markets, Korea and Taiwan were top contributors to the strong regional returns.

The portfolio underperformed the MSCI Emerging Markets ex China index in a quarter where Value underperformed Growth. While stocks identified by GMO as being attractively valued and having good momentum did reasonably well in aggregate, our selection within these groups detracted from portfolio performance.

Performance headwinds in the quarter included stock selection in Taiwan, a mix of underweight positioning and stock selection in Korea Information Technology and Industrials, and overweight positioning toward Financials in Thailand.

Positive contributors included underweight positioning toward Saudi Arabia and stock selection within Financials. Financials positions that added value included an overweight in Korea and underweight positioning in India and Saudi Arabia.

RISKS

Risks associated with investing in the Strategy may include: (1) Market Risk - Equities: the market price of equities may decline due to factors affecting the issuer, its industries, or the economy and equity markets generally. Declines in stock market prices generally are likely to reduce the net asset value of the Fund's shares; (2) Non-U.S. Investment Risk: the market prices of many non-U.S. securities (particularly of companies tied economically to emerging countries) fluctuate more than those of U.S. securities. Many non-U.S. markets (particularly emerging markets) are less stable, smaller, less liquid, and less regulated than U.S. markets, and the cost of trading in those markets often is higher than it is in U.S. markets; and (3) Currency Risk: fluctuations in exchange rates can adversely affect the market value of the Fund's non-U.S. currency holdings and investments denominated in non-U.S. currencies. This is not a complete list of risks associated with investing in the Strategy. Please contact GMO for more information.

Composite Inception Date: 31-Oct-21

Performance Returns: Performance for the year of inception is less than a full calendar year. Returns shown for periods greater than one year are on an annualized basis. To obtain performance information to the most recent month-end, visit www.gmo.com. **Performance data quoted represents past performance and is not predictive of future performance.** Net returns are presented after the deduction of a model advisory fee and incentive fee if applicable. These returns include transaction costs, commissions and withholding taxes on foreign income and capital gains and include the reinvestment of dividends and other income, as applicable. Fees paid by accounts within the composite may be higher or lower than the model fees used. Gross returns are presented gross of management fees and any incentive fees if applicable. These returns include transaction costs, commissions, withholding taxes on foreign income and capital gains and include the reinvestment of dividends and other income, as applicable. If management and incentive fees were deducted performance would be lower. For example, if, before fees, the strategy were to achieve a 10% annual rate of return above its hurdle rate each year for ten years, and an annual advisory fee of 1% and incentive fee of 20% of net returns above the hurdle rate were charged during that period, the resulting average annual net return (after the deduction of management and incentive fees) would be approximately 7.20%. **GMO LLC claims compliance with the Global Investment Performance Standards (GIPS®).** A Global Investment Performance Standards (GIPS®) Composite Report is available at www.gmo.com by clicking the GIPS® Composite Report link in the documents section of the strategy page. Actual fees are disclosed in Part 2 of GMO's Form ADV and are also available in each strategy's Composite Report.

QUARTERLY INVESTMENT REVIEW

PRODUCT OVERVIEW

The GMO Emerging Markets ex-China Strategy seeks total return by investing primarily in emerging (non-developed) market equities. The Strategy measures its performance against the MSCI Emerging Markets Index.

The Strategy's investment approach is grounded in the Systematic Equity team's belief that, in the short term, equity markets exhibit exploitable inefficiencies as a result of irrational investor actions, the imperfect flow of information, and the participation of non-economic actors, while in the long-term returns are ultimately driven by economic reality. The Strategy aims to take advantage of these inefficiencies by utilizing a multi-factor valuation model in conjunction with other methods, such as momentum and corporate alerts, to identify undervalued equity securities.

IMPORTANT INFORMATION

Benchmark(s): The MSCI Emerging Markets ex China Index is an independently maintained and widely published index which captures large and mid cap representation within Emerging Markets (EM) countries, excluding China. MSCI data may not be reproduced or used for any other purpose. MSCI provides no warranties, has not prepared or approved this report, and has no liability hereunder.

The above information is based on a representative account in the Strategy selected because it has the fewest restrictions and best represents the implementation of the Strategy.
