MAJOR PERFORMANCE DRIVERS

Global equity markets were up in the second quarter of 2025 despite continued trade policy and geopolitical uncertainties. Developed Markets outside the U.S. continued to outperform the U.S., while Emerging Markets outperformed Developed Markets.

In the second quarter, the MSCI EAFE Value index modestly underperformed the MSCI EAFE index. In this environment momentum models were the top performers, with positive contributions from both idiosyncratic stock momentum and network momentum signals.

The portfolio added value from a mix of stock selection and allocation decisions. Areas of stock selection strength included the U.K., Germany, Financials, Consumer Staples, and Consumer Discretionary. Underweight positioning toward the Energy sector also added to portfolio performance.

Detractors in the quarter included overweight positioning toward Japan Consumer Discretionary, France Health Care, and Finland Information Technology.

RISKS

Risks associated with investing in the Strategy may include: (1) Market Risk - Equities: the market price of equities may decline due to factors affecting the issuer, its industries, or the economy and equity markets generally. Declines in stock market prices generally are likely to reduce the net asset value of the Fund's shares; (2) Non-U.S. Investment Risk: the market prices of many non-U.S. securities (particularly of companies tied economically to emerging countries) fluctuate more than those of U.S. securities. Many non-U.S. markets (particularly emerging markets) are less stable, smaller, less liquid, and less regulated than U.S. markets, and the cost of trading in those markets often is higher than it is in U.S. markets; and (3) Management and Operational Risk: the risk that GMO's investment techniques will fail to produce desired results, including annualized returns and annualized volatility. This is not a complete list of risks associated with investing in the Strategy. Please contact GMO for more information.

Composite Inception Date: 31-Mar-87

Performance Returns: Performance for the year of inception is less than a full calendar year. Returns shown for periods greater than one year are on an annualized basis. To obtain performance information to the most recent month-end, visit www.gmo.com. **Performance data quoted represents past performance and is not predictive of future performance.** Net returns are presented after the deduction of a model advisory fee and incentive fee if applicable. These returns include transaction costs, commissions and withholding taxes on foreign income and capital gains and include the reinvestment of dividends and other income, as applicable. Fees paid by accounts within the composite may be higher or lower than the model fees used. Gross returns are presented gross of management fees and any incentive fees if applicable. These returns include transaction costs, commissions, withholding taxes on foreign income and capital gains and include the reinvestment of dividends and other income, as applicable. If management and incentive fees were deducted performance would be lower. For example, if, before fees, the strategy were to achieve a 10% annual rate of return above its hurdle rate each year for ten years, and an annual advisory fee of 1% and incentive fee of 20% of net returns above the hurdle rate were charged during that period, the resulting average annual net return (after the deduction of management and incentive fees) would be approximately 7.20%. **GMO LLC claims compliance with the Global Investment Performance Standards (GIPS®). A Global Investment Performance Standards (GIPS®) Composite Report is available at www.gmo.com by clicking the GIPS® Composite Report link in the documents section of the strategy page. GIPS® is a registered trademark owned by CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein. Actual fees are disclosed in Part 2 of GMO's Form ADV and are also available in each strategy's Composite Report.** Returns include a substantial, one-time litigation settlement recovery received on December 16, 2024. This event contributed 5.25% to 2024 annual performance, based on a representative account. Performance for other periods, including this date, was also positively impacted, sometimes materially. Without this recovery, performance would have been lower in both absolute terms and relative to the benchmark. Additional information is available upon request. The portfolio is actively-managed, is not managed relative to a benchmark and uses an index for performance comparison purposes only and, where applicable, to compute a performance fee.

QUARTERLY INVESTMENT REVIEW

PRODUCT OVERVIEW

The GMO International Equity Strategy seeks to generate high total return by investing primarily in non-U.S. developed market equities. The Strategy measures its performance against the MSCI EAFE Index for performance comparison purposes.

The Strategy's investment approach is grounded in the Systematic Equity team's belief that, in the short term, equity markets exhibit exploitable inefficiencies as a result of irrational investor actions, the imperfect flow of information, and the participation of non-economic actors, while in the long-term returns are ultimately driven by economic reality. The Strategy aims to take advantage of this inefficiency by utilizing a multi-factor valuation model in conjunction with other methods, such as momentum and corporate alerts, to identify mispriced equity securities.

IMPORTANT INFORMATION

Comparator Index(es): The MSCI EAFE + (Europe, Australasia, and Far East) Index is an internally maintained benchmark computed by GMO, comprised of (i) the MSCI EAFE (Europe, Australasia, and Far East) Value Index (MSCI Standard Index Series, net of withholding tax) through 06/30/2014 and (ii) the MSCI EAFE (Europe, Australasia, and Far East) Index (MSCI Standard Index Series, net of withholding tax) thereafter. MSCI data may not be reproduced or used for any other purpose. MSCI provides no warranties, has not prepared or approved this report, and has no liability hereunder. The MSCI EAFE (Europe, Australasia, and Far East) Value Index (MSCI Standard Index Series, net of withholding tax) is an independently maintained and widely published index comprised of international large and mid capitalization stocks that have a value style. Large and mid capitalization stocks encompass approximately 85% of each market's free float-adjusted market capitalization. Style is determined using a multi-factor approach based on historical and forward-looking characteristics. MSCI data may not be reproduced or used for any other purpose. MSCI provides no warranties, has not prepared or approved this report, and has no liability hereunder.

The above information is based on a representative account in the Strategy selected because it has the fewest restrictions and best represents the implementation of the Strategy.

For investors in Asia-Pac and Australia, these materials are intended for Institutional and Wholesale Investor Use Only.
