MAJOR PERFORMANCE DRIVERS

The J.P. Morgan GBI-EM Global Diversified Index + (GBI-EMGD) returned 3.3% during the fourth quarter of 2025. Local bond performance was positive (2.0%, with returns of 1.7% when hedged into U.S. dollars), while spot currency performance was also positive at 1.3%. The comparable figures for foreign developed markets' bonds were mixed in the fourth quarter, with -0.2% for local bonds (0.3% hedged), and spot FX performance of -1.7%. The dollar strengthened against other major currencies during the period, while emerging market exchange rates strengthened against the dollar.

The portfolio outperformed the benchmark in the fourth quarter, with the portfolio deriving positive alpha from interest rate market selection and currency selection. In interest rate market selection, the portfolio's overweight positions in South Africa (8.9% total local return), Chile (2.6%), Brazil (3.3%), and Peru (2.8%) added the most to alpha during the quarter. While unable to fully offset gains, overweight positions in Colombia (-3.7%) and underweight positions in Turkey (12.9%) and China (0.3%) detracted from alpha.

Currency selection performance was positive during the quarter. The most notable contributors to positive alpha were our portfolio's overweight positions in the Colombian peso, Peruvian sol, and Turkish lira, and underweight position in Indian rupee. The portfolio's overweight positions in the South African rand and Brazilian real, as well as off-benchmark long positions in Japanese yen and Korean won, were notable negative contributors to currency alpha, but less than offset some of the currency gains.

RISKS

Risks associated with investing in the Strategy may include: (1) Non-U.S. Investment Risk: the market prices of many non-U.S. securities (particularly of companies tied economically to emerging countries) fluctuate more than those of U.S. securities. Many non-U.S. markets (particularly emerging markets) are less stable, smaller, less liquid, and less regulated than U.S. markets, and the cost of trading in those markets often is higher than it is in U.S. markets; (2) Focused Investment Risk: the Fund invests its assets in the securities of a limited number of issuers, and a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund invested in the securities of a larger number of issuers; and (3) Currency Risk: fluctuations in exchange rates can adversely affect the market value of the Fund's non-U.S. currency holdings and investments denominated in non-U.S. currencies. This is not a complete list of risks associated with investing in the Strategy. Please contact GMO for more information.

Composite Inception Date: 29-Feb-08

Performance Returns: Performance for the year of inception is less than a full calendar year. Returns shown for periods greater than one year are on an annualized basis. To obtain performance information to the most recent month-end, visit www.gmo.com. **Performance data quoted represents past performance and is not predictive of future performance.** Net returns are presented after the deduction of a model advisory fee and incentive fee if applicable. These returns include transaction costs, commissions and withholding taxes on foreign income and capital gains and include the reinvestment of dividends and other income, as applicable. Fees paid by accounts within the composite may be higher or lower than the model fees used. Gross returns are presented gross of management fees and any incentive fees if applicable. These returns include transaction costs, commissions, withholding taxes on foreign income and capital gains and include the reinvestment of dividends and other income, as applicable. If management and incentive fees were deducted performance would be lower. For example, if, before fees, the strategy were to achieve a 10% annual rate of return above its hurdle rate each year for ten years, and an annual advisory fee of 1% and incentive fee of 20% of net returns above the hurdle rate were charged during that period, the resulting average annual net return (after the deduction of management and incentive fees) would be approximately 7.20%. **GMO LLC claims compliance with the Global Investment Performance Standards (GIPS®).** A Global Investment Performance Standards (GIPS®) Composite Report is available at www.gmo.com by clicking the GIPS® Composite Report link in the documents section of the strategy page. GIPS® is a registered trademark owned by CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein. Actual fees are disclosed in Part 2 of GMO's Form ADV and are also available in each strategy's Composite Report. Returns for the composite are based on estimated market values for the period from and including October 2008 through February 2009.

QUARTERLY INVESTMENT REVIEW

MAJOR PERFORMANCE DRIVERS CONT.

Instrument selection and other portfolio attributes added to alpha over the quarter, primarily driven by positive instrument selection and a positive impact from the swing pricing at month end. South Africa was the most notable on-benchmark country contributor in the instrument selection category. The choice of off-benchmark holdings in Venezuela, Argentina, Nigeria, Egypt, and Jamaica also contributed positively during the quarter. Gains were partly offset by losses given the choice of holdings in Brazil, Mexico, Poland, and Peru.

Entering the first quarter of 2026, the portfolio's largest currency active weights are the Colombian peso, Brazilian real, Turkish lira, Japanese yen, and the Peruvian sol on the positive side, and Indian rupee, Chinese yuan, Romanian leu, Czech koruna, and Indonesian rupiah on the negative side. The largest positive interest rate active weights are in Colombia, the Czech Republic, Mexico, Chile, and South Africa, while the largest negative ones are in Thailand, China, India, Israel, and Malaysia.

QUARTERLY INVESTMENT REVIEW

PRODUCT OVERVIEW

The GMO Emerging Country Local Debt Strategy's objective is total return in excess of its benchmark, the J.P. Morgan Government Bond Index - Emerging Markets Global Diversified (GBI-EMGD). The Strategy invests in local currency emerging debt.

GMO's Emerging Country Debt team focuses on bottom-up issue selection within sovereign and quasi-sovereign issuers with an emphasis on finding fundamental value, also employing advanced quantitative techniques to assess value across global emerging and frontier interest rate and currency markets. We believe that our approach provides our clients with the best chance for long-term success in this asset class and differentiates us from other emerging debt managers who focus on top-down timing elements.

IMPORTANT INFORMATION

Benchmark(s): The J.P. Morgan GBI-EM Global Diversified + Index is comprised of the J.P. Morgan GBI-EM Diversified Index through 8/31/2012 and the J.P. Morgan GBI-EM Global Diversified Index thereafter.

The above information is based on a representative account in the Strategy selected because it has the fewest restrictions and best represents the implementation of the Strategy.
