MAJOR PERFORMANCE DRIVERS

The third quarter saw equity markets continue in a risk-on manner, with the S&P hitting an all-time high and many technology-linked sectors seeing the same. Interest rates fell broadly. The U.S. Federal Reserve also cut rates by 25 bps, and U.S. 10-year yields ended the quarter down. Clean Energy was broadly up as the mix of risk-on, lower rates, and policy certainty continued to drive a re-rating of the sector. Many of the climate-relevant commodity markets also ended the quarter up – including copper, lithium, and uranium. Against this backdrop, the Climate Change portfolio outperformed the MSCI ACWI Index by one of the largest margins since the inception of the portfolio.

This was a quarter of exceptional performance across our Clean Energy portfolio, with nearly every name re-rating and several posting triple-digit gains. Ameresco led the pack, surging 120%, as improved project pipeline visibility and rising demand, particularly from datacenters, boosted sentiment. Many of our Solar stocks were not far behind as the tailwinds for the sector became clear to a broader audience. This marked the third consecutive quarter of earnings beats, with cyclical pressures like inventory gluts and high rates easing. Policy uncertainty has largely cleared, giving companies a clearer runway for planning and expansion. The structural growth case for renewable energy remains strong. Electricity demand is booming due to datacenter appetite for energy, EV adoption, and electrification, creating urgency for fast-to-deploy generation. Renewables and storage can be built faster and cheaper than fossil fuel solutions, making them attractive to a range of electricity customers.

RISKS

Risks associated with investing in the Fund may include: (1) Focused Investment Risk: the Fund invests its assets in the securities of a limited number of issuers, and a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund invested in the securities of a larger number of issuers; (2) Market Risk - Equities: the market price of equities may decline due to factors affecting the issuer, its industries, or the economy and equity markets generally. Declines in stock market prices generally are likely to reduce the net asset value of the Fund's shares; and (3) Management and Operational Risk: the risk that GMO's investment techniques will fail to produce desired results, including annualized returns and annualized volatility. For a more complete discussion of these and other risks, please consult the Fund's Prospectus.

Inception Date: 14-Mar-18

Performance Returns: Performance for the year of inception is less than a full calendar year. Returns shown for periods greater than one year are on an annualized basis. To obtain performance information to the most recent month-end, visit www.gmo.com. **Performance data quoted represents past performance and is not indicative of future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance data may be lower or higher than the performance data provided herein.** Net of all fees and expenses after reimbursement by the Manager, but not transaction costs, if any. If certain expenses were not reimbursed, performance would be lower. Gross of fees, expenses and transaction costs, if any. If these fees, expenses and costs were included, performance would be lower. A dilution adjustment may be applied on a subscription or redemption of shares to reflect the costs of dealing in the Fund's assets. The return on investment in the Fund may increase or decrease as a result of currency fluctuations if an investor's investment is made in a currency other than that used in the past performance calculation. If the Fund holds assets in currencies other than the base currency of the Fund and/or you invest in a share class that is denominated in a different currency than the base currency of the Fund, subject to any hedging at share class or Fund level, the value of your investment may be impacted by changes in the relative prices of the relevant currencies. The use of financial derivative instruments by the Fund may result in increased gains or losses within the Fund. Formerly Climate Change Investment Fund. The portfolio is actively-managed, is not managed relative to a benchmark and uses an index for performance comparison purposes only and, where applicable, to compute a performance fee.

QUARTERLY INVESTMENT REVIEW

MAJOR PERFORMANCE DRIVERS CONT.

We also saw strong results in some of the critical mineral segments. Supply shocks in copper, lithium, and uranium served as a timely reminder of how imbalanced the supply of minerals can be with expected demand, and how much prices can respond as a result. Our miners in these three areas did well. In addition, China is increasingly restricting exports of rare earth metals. Most notably, our small holding in Sunrise Energy Metals, an Australian producer of critical minerals, was up over 500% for the quarter thanks to a doubled resource estimate and a letter of interest from the U.S. government.

Within the Energy Efficiency portfolio, our auto part manufacturers, Valeo and BorgWarner, were strong performers after a good earnings season and strong downstream demand for EV manufacturers. We trimmed into some of this strength. It was a tougher quarter for HVAC producers as demand remains muted in the U.S.

Finally, we have been adding to a range of names across our Agriculture and Timber portfolios as valuations have started to look more attractive.

Despite wavering federal support in the U.S., many states – and much of the world – remain committed to the decarbonization of economies. As growth continues in the Climate Change sector, we continue to believe this portfolio is well-positioned to benefit. The Climate Change portfolio continues to trade at a historically sized discount to broader global equities, indicating substantial upside to come for patient capital.

Portfolio weights, as a percent of equity, for the positions mentioned were: Ameresco (5.5%), Valeo (2.5%), BorgWarner (1.3%), and Sunrise Energy Metals (1.1%).

QUARTERLY INVESTMENT REVIEW

PRODUCT OVERVIEW

The GMO Climate Change Transition Investment Fund seeks to generate high total return by investing primarily in equities of companies GMO believes are positioned to benefit, directly or indirectly, from efforts to curb or mitigate the long-term effects of global climate change, to address the environmental challenges presented by global climate change, or to help the world adapt to climate change through improved efficiency of resource consumption. We invest globally across the capitalization spectrum, which allows us to identify attractive investment opportunities wherever they may be.

We are seeing exceptional opportunities for long-term investors abound in a world mobilizing to address climate change, and profitability associated with efforts to mitigate and adapt to climate change is largely independent of the global economy. Climate change investors can benefit from this unique, diversifying source of return, historically available at attractive valuations given the secular tailwinds of change.
