## Benchmark-Free Allocation Strategy

### Performance returns (USD)

ANNUALIZED RETURNS (QUARTER-END)	Quarter-End	YTD	1-Year	3-Year	5-Year	10-Year	Since Inception
Benchmark-Free Allocation Strategy (net)	4.18	9.13	10.02	10.16	6.85	4.00	7.59
Benchmark-Free Allocation Strategy (gross)	4.38	9.54	10.87	11.02	7.72	4.85	8.46
CPI Index	0.59	1.20	2.70	2.87	4.56	3.06	2.52
Value Add	+3.59	+7.93	+7.32	+7.29	+2.29	+0.94	+5.07

### MAJOR PERFORMANCE DRIVERS

- Top-down asset allocation was good, driven primarily by strong equity returns, although leaning into Value equities in the U.S. did hamper returns there.
- Security selection was modestly positive across equities and fixed income, while the performance of the alternative strategies was negative.

Long-only equities represented 51.4% of the portfolio on average through the quarter, with 10.9% in Emerging Markets with a distinct Value bias, 6.4% in Japan Fundamental Value, 5.4% in Developed ex-U.S. Small Value, 6.5% in Developed ex-U.S., 3.9% in Resource Equity, 5.3% in U.S. Opportunistic Value, 9.8% in International Opportunistic Value, and 3.2% in Japan Small Value.

### RISKS

Risks associated with investing in the Strategy may include: (1) Management and Operational Risk: the risk that GMO's investment techniques will fail to produce desired results, including annualized returns and annualized volatility; (2) Market Risk - Equities: the market price of equities may decline due to factors affecting the issuer, its industries, or the economy and equity markets generally. Declines in stock market prices generally are likely to reduce the net asset value of the Fund's shares; and (3) Non-U.S. Investment Risk: The market prices of many non-U.S. securities (particularly of companies tied economically to emerging countries) fluctuate more than those of U.S. securities. Many non-U.S. markets (particularly emerging markets) are less stable, smaller, less liquid, and less regulated than U.S. markets, and the cost of trading in those markets often is higher than it is in U.S. markets. This is not a complete list of risks associated with investing in the Strategy. Please contact GMO for more information.

Composite Inception Date: 31-Jul-01

**Performance Returns:** Performance for the year of inception is less than a full calendar year. Returns shown for periods greater than one year are on an annualized basis. To obtain performance information to the most recent month-end, visit [www.gmo.com](http://www.gmo.com). **Performance data quoted represents past performance and is not predictive of future performance.** Net returns are presented after the deduction of a model advisory fee and incentive fee if applicable. These returns include transaction costs, commissions and withholding taxes on foreign income and capital gains and include the reinvestment of dividends and other income, as applicable. Fees paid by accounts within the composite may be higher or lower than the model fees used. Gross returns are presented gross of management fees and any incentive fees if applicable. These returns include transaction costs, commissions, withholding taxes on foreign income and capital gains and include the reinvestment of dividends and other income, as applicable. If management and incentive fees were deducted performance would be lower. For example, if, before fees, the strategy were to achieve a 10% annual rate of return above its hurdle rate each year for ten years, and an annual advisory fee of 1% and incentive fee of 20% of net returns above the hurdle rate were charged during that period, the resulting average annual net return (after the deduction of management and incentive fees) would be approximately 7.20%. **GMO LLC claims compliance with the Global Investment Performance Standards (GIPS®).** A Global Investment Performance Standards (GIPS®) Composite Report is available at [www.gmo.com](http://www.gmo.com) by clicking the GIPS® Composite Report link in the documents section of the strategy page. GIPS® is a registered trademark owned by CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein. Actual fees are disclosed in Part 2 of GMO's Form ADV and are also available in each strategy's Composite Report. Prior to January 1, 2012, the accounts in the Composite served as the principal component of a broader real return strategy. Beginning January 1, 2012, accounts in the composite have been managed as a standalone investment. Returns include a substantial, one-time litigation settlement recovery received on December 16, 2024. This event contributed 2.45% to 2024 annual performance, based on a representative account. Performance for other periods, including this date, was also positively impacted, sometimes materially. Without this recovery, performance would have been lower in both absolute terms and relative to the benchmark. Additional information is available upon request. The portfolio is actively-managed, is not managed relative to a benchmark and uses an index for performance comparison purposes only and, where applicable, to compute a performance fee.

# QUARTERLY INVESTMENT REVIEW

## MAJOR PERFORMANCE DRIVERS CONT.

The equity portfolio returned 10.8% for the quarter, lagging the MSCI ACWI return of 11.5%. Top-down regional exposure had a marginal positive impact, but stylistic exposures had a significant negative impact as Value trailed far behind Growth, particularly in the U.S. market. Security selection was modestly positive for the quarter. Our Emerging Markets portfolio returned 13.3%, ahead of the MSCI Emerging Market index return of 12.0%. The Japan Fundamental Value portfolio posted 10.9%, compared to the TOPIX return of 11.3%, while the Japan Small Value exposure posted 7.8%, and the Developed ex-U.S. Small Value portfolio delivered 16.4%. The Developed ex-U.S. exposure posted 13.2%, which beat the MSCI World ex-USA index by 120 bps. Resource Equity posted 7.0%, the U.S. Opportunistic Value exposure returned 3.2%, 20 bps behind the MSCI USA Value index return of 3.4%, and International Opportunistic Value posted 10.1%, behind the MSCI World ex-USA Value return of 10.5%.

Alternative strategies averaged 29.4% through the quarter, made up of 15.7% in Equity Dislocation and 13.8% in Alternative Allocation, a broad and diversified range of alternative approaches in a single holding. Alternative strategies returned -3.6% for the quarter. Equity Dislocation returned -6.6%, well ahead of the MSCI ACWI Value minus MSCI ACWI Growth comparator of -11.4%, and the strategy remains well ahead of the naïve approach over longer time periods. Alternative Allocation posted -1.6% for the quarter as the exposure to Equity Dislocation hampered returns, and long Quality/short Junk also fell in the speculative risk on environment.

Fixed income represented 19.2% of the portfolio on average through the quarter, including 2.1% in asset-backed securities, 2.1% in Emerging Country Debt, and 14.9% in U.S. Treasuries. Our fixed income strategies returned 2.0% for the quarter, ahead of the Bloomberg U.S. Aggregate return of 1.2%. Emerging Country Debt, as measured by the J.P. Morgan EMBIG-D index, had a 3.3% return, and the portfolio beat that handsomely with a 4.7% return. The asset-backed securities posted 1.6%, ahead of the Bloomberg U.S. Securitized index return of 1.2%. It was a solid quarter for traditional duration and the U.S. Treasury exposure returned 1.6%.

---

# QUARTERLY INVESTMENT REVIEW

## PRODUCT OVERVIEW

The GMO Benchmark-Free Allocation Strategy seeks to generate positive total return by allocating dynamically across asset classes, free from the constraints of traditional benchmarks.

The philosophy that underlies all of GMO's Asset Allocation investment strategies is the belief that, at times and in the short term, the pricing of asset classes can deviate from true intrinsic value, but mean reverts to appropriate valuation levels over the long term. GMO's proprietary 7-Year Asset Class Forecasts form the foundation of our investment process, providing a framework to assess the return opportunity embedded in different asset classes. We use that insight to allocate to what we believe are the most attractively priced asset classes.

---

## IMPORTANT INFORMATION

**Comparator Index(es):** The CPI (Consumer Price Index) for All Urban Consumers US All Items is published monthly by the U.S. government as an indicator of changes in price levels (or inflation) paid by urban consumers for a representative basket of goods and services. CPI Index returns are typically reported on the 15th of the month. The CPI data reported may not include the most recent month-end which could impact the data that GMO has provided.

The above information is based on a representative account in the Strategy selected because it has the fewest restrictions and best represents the implementation of the Strategy.

For investors in Asia-Pac and Australia, these materials are intended for Institutional and Wholesale Investor Use Only.
