MAJOR PERFORMANCE DRIVERS

The third quarter saw equity markets continue in a risk-on manner, with the S&P hitting an all-time high and many technology-linked sectors seeing the same. The U.S. Federal Reserve also cut rates by 25 bps, and U.S. 10-year yields ended the quarter down. Clean Energy was broadly up as the mix of risk-on, lower rates, and policy certainty continued to drive a re-rating of the sector. Many of the climate-relevant commodity markets also ended the quarter up – including copper, lithium, and uranium. Against this backdrop, the Resource Transition portfolio was up significantly for the quarter, outperforming the MSCI ACWI Commodity Producers ex-Energy Index.

This was a quarter of exceptional performance across our Clean Energy portfolio, with nearly every name re-rating and several posting triple-digit gains. Sunrun and Ameresco led the pack, in Ameresco's case surging 120%, as improved project pipeline visibility and rising demand, particularly from data centers, boosted sentiment. Our other solar stocks were not far behind as the tailwinds for the sector became clear to a broader audience. This marked the third consecutive quarter of earnings beats, with cyclical pressures such as inventory gluts and high rates easing. Policy uncertainty has largely cleared, giving companies a clearer runway for planning and expansion. The structural growth case for renewable energy remains strong. Electricity demand is booming due to data center appetite for energy, EV adoption, and electrification, creating urgency for fast-to-deploy generation. Renewables and storage can be built faster and cheaper than fossil fuel solutions, making them attractive to a range of electricity customers.

RISKS

Risks associated with investing in the Strategy may include: (1) Focused Investment Risk: the Fund invests its assets in the securities of a limited number of issuers, and a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund invested in the securities of a larger number of issuers; (2) Commodities Risk: commodity prices can be extremely volatile, and exposure to commodities can cause the value of the Fund's shares to decline or fluctuate more than if the Fund had a broader range of investments; and (3) Market Risk - Equities: the market price of equities may decline due to factors affecting the issuer, its industries, or the economy and equity markets generally. Declines in stock market prices generally are likely to reduce the net asset value of the Fund's shares. This is not a complete list of risks associated with investing in the Strategy. Please contact GMO for more information.

Composite Inception Date: 28-Feb-23

Performance Returns: Performance for the year of inception is less than a full calendar year. Returns shown for periods greater than one year are on an annualized basis. To obtain performance information to the most recent month-end, visit www.gmo.com. **Performance data quoted represents past performance and is not predictive of future performance.** Net returns are presented after the deduction of a model advisory fee and incentive fee if applicable. These returns include transaction costs, commissions and withholding taxes on foreign income and capital gains and include the reinvestment of dividends and other income, as applicable. Fees paid by accounts within the composite may be higher or lower than the model fees used. Gross returns are presented gross of management fees and any incentive fees if applicable. These returns include transaction costs, commissions, withholding taxes on foreign income and capital gains and include the reinvestment of dividends and other income, as applicable. If management and incentive fees were deducted performance would be lower. For example, if, before fees, the strategy were to achieve a 10% annual rate of return above its hurdle rate each year for ten years, and an annual advisory fee of 1% and incentive fee of 20% of net returns above the hurdle rate were charged during that period, the resulting average annual net return (after the deduction of management and incentive fees) would be approximately 7.20%. **GMO LLC claims compliance with the Global Investment Performance Standards (GIPS®). A Global Investment Performance Standards (GIPS®) Composite Report is available at www.gmo.com by clicking the GIPS® Composite Report link in the documents section of the strategy page. Actual fees are disclosed in Part 2 of GMO's Form ADV and are also available in each strategy's Composite Report.** The portfolio is actively-managed, is not managed relative to a benchmark and uses an index for performance comparison purposes only and, where applicable, to compute a performance fee.

QUARTERLY INVESTMENT REVIEW

MAJOR PERFORMANCE DRIVERS CONT.

Within metals and minerals, rising prices across copper, iron ore, lithium, and precious metals were a boon to the diversified miners and their pure-play equivalents. Some of this price moment reflected supply shocks such as a reduction in copper production from Indonesia and a reduction in lithium production in China – a timely reminder of how imbalanced the supply of minerals can be with expected demand, and how much prices can respond as a result. In addition, China is increasingly restricting exports of rare earth metals. Most notably, our small holding in Sunrise Energy Metals, an Australian producer of critical minerals, was up over 500% for the quarter thanks to a doubled resource estimate and a letter of interest from the U.S. government. Frustratingly, given it sits outside of this portfolio's mandate, gold continued its rally and was a major driver of the benchmark return.

Finally, we have been adding to a range of names across our Agriculture and Timber portfolios as valuations have started to look more attractive.

The long-term supply/demand dynamics in natural resource markets favor high and rising prices. But the deeply discounted valuations still available in some parts of this sector mean that investors don't need commodity prices to rise in order to expect strong returns. Flat commodity prices could still lead to a healthy return from a resource equity portfolio. In addition, valuations within the Clean Energy sector are now increasingly attractive.

Portfolio weights, as a percent of equity, for the positions mentioned were: Sunrun (4.3%), Ameresco (4.1%), and Sunrise Energy Metals (1.6%).

QUARTERLY INVESTMENT REVIEW

PRODUCT OVERVIEW

The GMO Resource Transition Strategy seeks to generate total return by investing primarily in equities of companies in the resource transition sector.

GMO's Focused Equity team believes that global population growth, the industrialization of emerging markets, and the clean energy transition will increase global demand for natural resources and that, given their finite supply, the prices of these resources will increase over time. The Strategy seeks to invest in the securities of companies that we believe will benefit from – and avoid companies we believe will be adversely affected by – this expected long-term rise in natural resource prices as well as the increasing demand for clean energy.

IMPORTANT INFORMATION

Comparator Index(es): The MSCI ACWI (All Country World) Commodity Producers ex-Energy Index is an independently maintained benchmark comprised of listed large and mid capitalization commodity producers within the global developed and emerging markets, excluding companies in the energy sector as defined by GICS. MSCI data may not be reproduced or used for any other purpose. MSCI provides no warranties, has not prepared or approved this report, and has no liability hereunder.

The above information is based on a representative account in the Strategy selected because it has the fewest restrictions and best represents the implementation of the Strategy.
