HIGH YIELD CLASS I

OVERVIEW

The GMO High Yield Fund seeks to generate total return in excess of that of its benchmark, the Markit iBoxx USD Liquid High Yield Index, by applying a systematic, factor-based approach to portfolio construction. It is designed to capture alpha from top-down sources of risk premia, taking advantage of structural market inefficiencies, while maintaining a liquid portfolio. Our top-down, data-driven approach (in what is still largely a fundamentally managed asset class) brings a unique perspective that allows us to allocate capital across a range of high yield instruments in an effort to achieve optimal risk-adjusted returns in excess of the Fund's benchmark.

GLOSSARY

Credit Ratings: The credit ratings above may encompass emerging debt, developed rates, and asset-backed exposures. Ratings for the developed rates exposures are derived by taking the lowest issue level rating between Standard and Poor's & Moody's scores and rolling these up into the portfolio's overall quality brackets. Ratings for emerging debt are determined using the middle of the Moody's, S&P, and Fitch ratings when all three are available, the lower of the two ratings when two ratings are available, and the sole rating when only one rating is available. Ratings for the asset-backed exposures are derived by using the lowest rating among rating agencies at the issue level. Final credit ratings are expressed based upon Standard and Poor's ratings scale. Standard & Poor's rates securities from AAA (highest quality) to C (lowest quality), and D to indicate securities in default; some securities are not rated and are included in the NR category. BB and below are considered below investment grade securities. Please refer to our website for additional information: https://www.gmo.com/americas/benchmark-disclaimers/

Risk Statistics: Risk profile data is net of fees. Alpha is a measure of risk-adjusted return. Beta is a measure of a portfolio's sensitivity to the market. R-Squared is a measure of how well a portfolio tracks the market. Sharpe Ratio is the return over the risk free rate per unit of risk. Std Deviation is a measure of the volatility of a portfolio.

ADDITIONAL GLOSSARY OF TERMS

Coupon
The annual income received from a fixed-income security, expressed as a percentage of the par value of the security and par weighted on portfolio level.

Credit (%)
The proportion of a mutual fund's total net assets that is invested in credit instruments—such as corporate bonds, securitized debt, or other credit-related securities—expressed as a percentage. This metric indicates the fund's exposure to credit markets and associated credit risk.

Effective Duration
A measure of a portfolio's price sensitivity to interest rate changes, including expected changes in cash flows caused by embedded options. The higher the effective duration, the higher the sensitivity to interest rate changes.

Maturity
A weighted average of all the maturities of the bonds in a portfolio, computed by weighting each bond's effective maturity by the market value of the security.

Modified Duration
A measure of a portfolio's price sensitivity to changes in interest rates. It estimates the percentage change in price for a 1% (100 basis point) change in yield, assuming all other factors remain constant.

Option-Adjusted Spread
Option-adjusted spread (OAS) is the spread over a benchmark yield curve that remains after accounting for the value of embedded options.

Spread
The difference between the yield on a bond or credit instrument and the yield on a benchmark security of similar maturity, typically a government bond. It reflects the additional compensation investors receive for taking on credit risk and is usually expressed in basis points.

Spread Duration
A measure of the portfolio's sensitivity to changes in credit spreads.

Weighted Average Life
A measure of average number of years until the principal of the securities is expected to be fully repaid.

Yield to Maturity
Represents the weighted average annualized return an investor would earn if the ETF's underlying bonds were held to maturity, assuming all interest payments are made as scheduled, bonds are held to maturity, coupons are reinvested at the same rate.

Yield to Worst
The lowest potential yield an investor can earn on a bond without the issuer defaulting, taking into account any call, put, or other early redemption features.
