

GLOBAL EQUITY ALLOCATION

OVERVIEW

The GMO Global Equity Allocation Fund seeks to generate total return greater than that of the MSCI All Country World Index.

The philosophy that underlies all of GMO's Asset Allocation investment strategies is the belief that, at times and in the short term, the pricing of asset classes can deviate from true intrinsic value but mean reverts to appropriate valuation levels over a complete market cycle. Using GMO's 7-Year Asset Class Forecasts, the Fund seeks to allocate to areas of the global equity markets we believe are most attractively valued. Our approach combines the best of GMO's top-down Asset Allocation views and bottom-up equity research to identify mispricings at both the asset class and individual security levels. The Fund allocates to equity strategies that are actively managed by other GMO investment teams with expertise and experience in security selection within their respective markets.

Net of all fees and expenses after reimbursement by the Manager, but not transaction costs, if any. If certain expenses were not reimbursed, performance would be lower. **Performance data quoted represents past performance and is not indicative of future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance data may be lower or higher than the performance data provided herein. To obtain performance information to the most recent month-end, visit www.gmo.com.** Returns include a substantial, one-time litigation settlement recovery received on December 16, 2024. This event contributed 1.28% to 2024 annual performance. Performance for other periods, including this date, was also positively impacted, sometimes materially. Without this recovery, performance would have been lower in both absolute terms and relative to the benchmark. Returns reflect a significant, one-time increase to the net assets on November 26, 2025 attributable to European Union discriminatory tax refunds. These refunds contributed 1.12% to 2025 annual performance. Returns for other periods that include the date/period mentioned above were also positively impacted, sometimes substantially. In the absence of the refunds, performance would have been lower, both in absolute terms and relative to the benchmark. Returns include a substantial, one-time proceed from the sale of certain Russian securities. The one-time sale of these securities contributed 1.39% (1-day performance impact). Performance for other time periods was also positively impacted. Without these proceeds, performance would have been lower. Additional information is available upon request.

Risks: Risks associated with investing in the Fund may include: (1) Market Risk - Equities: the market price of equities may decline due to factors affecting the issuer, its industries, or the economy and equity markets generally. Declines in stock market prices generally are likely to reduce the net asset value of the Fund's shares; (2) Management and Operational Risk: the risk that GMO's investment techniques will fail to produce desired results, including annualized returns and annualized volatility; and (3) Non-U.S. Investment Risk: the market prices of many non-U.S. securities (particularly of companies tied economically to emerging countries) fluctuate more than those of U.S. securities. Many non-U.S. markets (particularly emerging markets) are less stable, smaller, less liquid, and less regulated than U.S. markets, and the cost of trading in those markets often is higher than it is in U.S. markets. For a more complete discussion of these and other risks, please consult the Fund's Prospectus. **Performance Returns:** Returns shown for periods greater than one year are on an annualized basis. Annualized Returns may include the impact of purchase premiums and redemption fees. The GMO Trust funds are distributed in the United States by Funds Distributor LLC. GMO and Funds Distributor LLC are not affiliated.
