MAJOR PERFORMANCE DRIVERS

Index Performance

Corporate credit spreads faced a turbulent start to the second quarter following President Trump's sweeping tariff announcements, which unsettled markets and raised fears about a slowdown in growth and rising goods inflation. However, the administration's decision to push out deadlines on trade deals reversed much of the initial selloff. Throughout the quarter, labor market data was constructive, and inflation stayed well-contained despite tariff adjustments, creating a supportive backdrop for investment grade corporate bonds.

The asset class delivered excess returns of 1.0%, further boosted by the move lower in yields, resulting in a total return of 1.8% for the quarter. The rally was most pronounced in the BBB-rated cohort, where credit spreads tightened 12 basis points. Across sectors, credit spreads within Communications narrowed the most, while Financing companies lagged. Credit curves flattened and the 10+ year maturity segment generated notable excess returns.

Portfolio Returns

The Systematic Investment-Grade portfolio delivered positive alpha in the second quarter. Valuation-based signals were the primary driver of relative returns, while momentum and company fundamental indicators detracted. Credit selection was strongest within the Consumer Cyclical and Energy sectors, however an overweight to the Communications sector hurt from an allocation perspective.

RISKS

Risks associated with investing in the Strategy may include: (1) Management and Operational Risk: the risk that GMO's investment techniques will fail to produce desired results, including annualized returns and annualized volatility; (2) Market Risk - Fixed Income Investments: the market price of a fixed income investment can decline due to a number of market-related factors, including rising interest rates and widening credit spreads or decreased liquidity stemming from the market's uncertainty about the value of a fixed income investment (or class of fixed income investments); and (3) Credit Risk: the risk that the issuer or guarantor of a fixed income investment or the obligor of an obligation underlying an asset-backed security will be unable or unwilling to satisfy its obligation to pay principal and interest or otherwise to honor its obligations in a timely manner. This is not a complete list of risks associated with investing in the Strategy. Please contact GMO for more information.

Composite Inception Date: 30-Sep-20

Performance Returns: Performance for the year of inception is less than a full calendar year. Returns shown for periods greater than one year are on an annualized basis. To obtain performance information to the most recent month-end, visit www.gmo.com. **Performance data quoted represents past performance and is not predictive of future performance.** Net returns are presented after the deduction of a model advisory fee and incentive fee if applicable. These returns include transaction costs, commissions and withholding taxes on foreign income and capital gains and include the reinvestment of dividends and other income, as applicable. Fees paid by accounts within the composite may be higher or lower than the model fees used. Gross returns are presented gross of management fees and any incentive fees if applicable. These returns include transaction costs, commissions, withholding taxes on foreign income and capital gains and include the reinvestment of dividends and other income, as applicable. If management and incentive fees were deducted performance would be lower. For example, if, before fees, the strategy were to achieve a 10% annual rate of return above its hurdle rate each year for ten years, and an annual advisory fee of 1% and incentive fee of 20% of net returns above the hurdle rate were charged during that period, the resulting average annual net return (after the deduction of management and incentive fees) would be approximately 7.20%. **GMO LLC claims compliance with the Global Investment Performance Standards (GIPS®).** A Global Investment Performance Standards (GIPS®) Composite Report is available at www.gmo.com by clicking the GIPS® Composite Report link in the documents section of the strategy page. Actual fees are disclosed in Part 2 of GMO's Form ADV and are also available in each strategy's Composite Report.

QUARTERLY INVESTMENT REVIEW

PRODUCT OVERVIEW

The GMO Systematic Investment Grade Credit Strategy is an active corporate credit strategy that seeks to generate alpha by allocating to sources of risk premium through factor-based models for credit selection. The Strategy allocates to measures of value, quality, and momentum captured through proprietary fair value models, measures of changes in default risk, and momentum signals derived from credit and equity assets. ESG factors are considered a component of the quality pillar at GMO and the portfolio is managed to target an overall ESG profile that is higher than that of the Bloomberg U.S Corporate Index. Risk is managed through quantitative portfolio construction methods that control for overall benchmark spread, duration, and risk characteristics.

IMPORTANT INFORMATION

Benchmark(s): The Bloomberg US Corporate Index measures the investment grade, fixed-rate, taxable corporate bond market. It includes USD denominated securities publicly issued by US and non-US industrial, utility, and financial issuers. The index includes securities with remaining maturity of at least one year.

The above information is based on a representative account in the Strategy selected because it has the fewest restrictions and best represents the implementation of the Strategy.
