

# GMO BEYOND CHINA

## OVERVIEW

The GMO Beyond China ETF seeks to deliver total return by investing primarily in equities of companies GMO believes are positioned to benefit, directly or indirectly, from the expected trend of companies diversifying their supply chains. We believe this secular trend is an attractive investment opportunity driven by a combination of increasing labor costs in China, increasing geopolitical tensions, and increasing focus on supply chain diversification.

The GMO Beyond China ETF will primarily invest in emerging market equities with the exception of Chinese securities. GMO uses a combination of proprietary quantitative and fundamental investment methods to identify emerging market equities that are well positioned to benefit from the expected trend of nearshoring. In addition, GMO will use investment methods that focus on growth, quality, valuation, and other drivers of fundamentals to further identify attractive securities.

**Risks:** Risks associated with investing in the Fund may include: (1) Market Risk - Equities: the market price of equities may decline due to factors affecting the issuer, its industries, or the economy and equity markets generally. Declines in stock market prices generally are likely to reduce the net asset value of the Fund's shares; (2) Non-U.S. Investment Risk: the market prices of many non-U.S. securities (particularly of companies tied economically to emerging countries) fluctuate more than those of U.S. securities. Many non-U.S. markets (particularly emerging markets) are less stable, smaller, less liquid, and less regulated than U.S. markets, and the cost of trading in those markets often is higher than it is in U.S. markets; and (3) Currency Risk: Fluctuations in exchange rates can adversely affect the market value of the Fund's non-U.S. currency holdings and investments denominated in non-U.S. currencies. For a more complete discussion of these and other risks, please consult the Fund's Prospectus. **Performance Returns:** Returns shown for periods greater than one year are on an annualized basis. Exchange Traded Funds (ETFs) are bought and sold through exchange trading at market price (not NAV), and are not individually redeemed from the fund. Shares may trade at a premium or discount to their NAV in the secondary market. Brokerage commissions will reduce returns.
