Value Add	+1.49	+1.49	-	-	-	-	+1.49

MAJOR PERFORMANCE DRIVERS

Global equity markets performed well again in the third quarter, despite the fluid global tariff environment and geopolitical uncertainties. Returns reflected continued optimism around AI and expectations that companies will be able to navigate the real-world impact of trade tensions.

The portfolio added value in an environment where expensive, lower quality stocks outperformed. The outperformance was largely driven by the success of our Momentum signals, with an additional tailwind from stocks that exhibited both attractive Value and good Momentum characteristics.

Areas of stock selection strength included Industrials and Financials. Top contributors included long positions in AppLovin (U.S. Information Technology), Reddit (U.S. Communication Services), and Fujikura (Japanese Industrials). The impact of net country and sector allocation decisions was incrementally positive.

Challenges included stock selection within the Information Technology, Consumer Discretionary, and Healthcare sectors. Top detractors included short positions in Western Digital (U.S. Information Technology), SoftBank Group (Japan Communication Services), and Warner Bros. Discovery (U.S. Communication Services).

RISKS

Risks associated with investing in the Strategy may include: (1) Accelerated Transaction Risk: for a Fund to take advantage of certain available investment opportunities, GMO may need to make investment decisions on an expedited basis. In such cases, the information available to GMO at the time of an investment decision may be limited. GMO may not, therefore, have access; (2) Adjustable-Rate Securities Risk: Although the rate adjustment feature may act as a buffer to reduce sharp changes in the market value of adjustable rate securities, changes in market interest rates or changes in the issuer’s creditworthiness may still affect their market value; and (3) Asset-Backed and Related Securities Risk: Asset-backed securities are exposed to greater risk of severe credit downgrades, illiquidity, and defaults than many other types of fixed income investments. This is not a complete list of risks associated with investing in the Strategy. Please contact GMO for more information.

Composite Inception Date: 30-Jun-25

Performance Returns: Performance for the year of inception is less than a full calendar year. Returns shown for periods greater than one year are on an annualized basis. To obtain performance information to the most recent month-end, visit www.gmo.com. **Performance data quoted represents past performance and is not predictive of future performance.** Net returns are presented after the deduction of a model advisory fee and incentive fee if applicable. These returns include transaction costs, commissions and withholding taxes on foreign income and capital gains and include the reinvestment of dividends and other income, as applicable. Fees paid by accounts within the composite may be higher or lower than the model fees used. Gross returns are presented gross of management fees and any incentive fees if applicable. These returns include transaction costs, commissions, withholding taxes on foreign income and capital gains and include the reinvestment of dividends and other income, as applicable. If management and incentive fees were deducted performance would be lower. For example, if, before fees, the strategy were to achieve a 10% annual rate of return above its hurdle rate each year for ten years, and an annual advisory fee of 1% and incentive fee of 20% of net returns above the hurdle rate were charged during that period, the resulting average annual net return (after the deduction of management and incentive fees) would be approximately 7.20%. **GMO does not yet have a GIPS-compliant report for this composite since it has not managed accounts in this strategy for a full year.**

QUARTERLY INVESTMENT REVIEW

PRODUCT OVERVIEW

The GMO World Market Neutral Strategy seeks total return by maintaining long exposure to stocks that we consider attractive and short exposure to stocks that we consider unattractive. The Strategy uses a combination of proprietary stock selection models such as Valuation, Quality, and Momentum to determine the attractiveness of each individual stock. The eligible universe for both the long and short side consists of developed market equities. It is expected that the Strategy will have a low correlation to traditional risk assets, and we would not expect there to be significant net exposures to any country, sector, or industry group.

IMPORTANT INFORMATION

Benchmark(s): The FTSE 3-Month Treasury Bill Index is an independently maintained and widely published index comprised of short-term U.S. Treasury bills.

The above information is based on a representative account in the Strategy selected because it has the fewest restrictions and best represents the implementation of the Strategy.

For private bank intermediaries in Singapore and Hong Kong, these materials are intended for institutional and Accredited/Professional Investors Use Only.

ABOUT GMO

Founded in 1977, GMO is a global asset manager committed to delivering superior performance and advice to our clients.
