

CLIMATE CHANGE STRATEGY

Quarterly Investment Review

PRODUCT OVERVIEW

The GMO Climate Change Strategy seeks to deliver high total return by investing primarily in equities of companies GMO believes are positioned to benefit, directly or indirectly, from efforts to curb or mitigate the long-term effects of global climate change, to address the environmental challenges presented by global climate change, or to help the world adapt to climate change through improved efficiency of resource consumption. The Strategy invests globally across the capitalization spectrum, which allows GMO to pursue attractive investment opportunities wherever they may be.

The Focused Equity team believes exceptional opportunities for long-term investors abound in a world mobilizing to address climate change, and profitability associated with efforts to mitigate and adapt to climate change is largely independent of the global economy. Climate change investors can benefit from this unique, diversifying source of return, historically available at attractive valuations given the secular tailwinds of change.

MAJOR PERFORMANCE DRIVERS

The second quarter saw a 180-degree shift in market sentiment, with risk-on enthusiasm driving appetite for AI hardware stocks along with more cyclical and speculative names. Much of this bubbly sentiment was in areas/sectors out of scope for this portfolio, so we did not participate in much of the froth. The market largely shrugged off war in Iran by the start of the quarter; energy prices fell, and commodities more generally were down. Outside of a few clean energy names that had AI datacenter spending hype driving their performance, that sector was also broadly down. Against this backdrop, the Climate Change portfolio was up, but underperformed the MSCI ACWI Index.

Digging into performance across the portfolio, our clean energy book gave back a portion of its outsized gains from the prior three quarters. Biofuel names felt the knock-on effect as the economic case for fossil fuel substitution temporarily softened. Darling Ingredients and Green Plains, both strong contributors in prior quarters, gave back some of their earlier 2026 gains. Lithium markets were similarly pressured: demand signals from China disappointed as EV sales growth moderated, while the prospect of meaningful new supply coming online drove prices lower. We see this less as a reversal of the long-term electrification story and more as a valuation reset. Downstream, the battery and energy storage producers also derated a little, giving us the opportunity to top up positions like LG Chem and CATL.

Although AI hardware and memory chip names are outside of this portfolio's scope, we did hold exposure to power semiconductor companies within our energy efficiency portfolio. This was one of the strongest quarters for these names in recent memory, as positive sentiment, the AI infrastructure buildout, and electrification demand helped to drive these names upwards. As the quarter wore on, valuations in semis looked increasingly stretched and the near-term thesis increasingly dependent on AI capex cycles rather than structural energy transition dynamics, we took profit and chose to exit most of those positions. Part of that capital was redeployed in our electric grid portfolio, including into EPC companies providing high voltage solutions to electric grids. As the world continues to electrify, the long-run case for these areas remains as compelling as ever, and we were pleased to add exposure at attractive valuations. We are also seeing a valuation opportunity opening up in our adaptation names and have been allocating to precision agriculture and timber.

As the world makes the transition to cleaner, renewable energy and economies grapple with electrification and climate change adaptation, we continue to believe this portfolio is well-positioned to benefit. The Climate Change portfolio continues to trade at a 20% discount to broader global equities, despite superior growth prospects, indicating substantial upside to come for patient capital.

Portfolio weights, as a percent of equity, for the positions mentioned were: Darling Ingredients (4.0%), Green Plains (2.3%), LG Chem (3.4%), and CATL (2.7%).

CLIMATE CHANGE STRATEGY

Quarterly Investment Review

ANNUALIZED RETURNS (USD, %) (QUARTER-END)

	Quarter-End	YTD	1-Year	3-Year	5-Year	10-Year	Since Inception
Climate Change Strategy (net)	5.90	16.04	56.05	1.79	-0.16	-	8.22
Climate Change Strategy (gross)	6.12	16.51	57.34	2.64	0.66	-	9.10
MSCI ACWI	14.93	11.25	23.67	19.69	10.98	-	12.23
Value Add	-9.03	+4.79	+32.38	-17.90	-11.15	-	-4.00

RISKS

Risks associated with investing in the Strategy may include: (1) Focused Investment Risk: the Fund invests its assets in the securities of a limited number of issuers, and a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund invested in the securities of a larger number of issuers; (2) Market Risk - Equities: the market price of equities may decline due to factors affecting the issuer, its industries, or the economy and equity markets generally. Declines in stock market prices generally are likely to reduce the net asset value of the Fund's shares; and (3) Management and Operational Risk: the risk that GMO's investment techniques will fail to produce desired results, including annualized returns and annualized volatility. This is not a complete list of risks associated with investing in the Strategy. Please contact GMO for more information.

Composite Inception Date: 30-Apr-17

Performance Returns: Performance for the year of inception is less than a full calendar year. Returns shown for periods greater than one year are on an annualized basis. To obtain performance information to the most recent month-end, visit www.gmo.com. **Performance data quoted represents past performance and is not indicative of future results.** Net returns are presented after the deduction of a model advisory fee and incentive fee if applicable. These returns include transaction costs, commissions and withholding taxes on foreign income and capital gains and include the reinvestment of dividends and other income, as applicable. Fees paid by accounts within the composite may be higher or lower than the model fees used. Gross returns are presented gross of management fees and any incentive fees if applicable. These returns include transaction costs, commissions, withholding taxes on foreign income and capital gains and include the reinvestment of dividends and other income, as applicable. If management and incentive fees were deducted performance would be lower. For example, if, before fees, the strategy were to achieve a 10% annual rate of return above its hurdle rate each year for ten years, and an annual advisory fee of 1% and incentive fee of 20% of net returns above the hurdle rate were charged during that period, the resulting average annual net return (after the deduction of management and incentive fees) would be approximately 7.20%. **GMO LLC claims compliance with the Global Investment Performance Standards (GIPS®).
