

SYSTEMATIC INVESTMENT GRADE CREDIT STRATEGY

Quarterly Investment Review

PRODUCT OVERVIEW

The GMO Systematic Investment Grade Credit Strategy is an active corporate credit strategy that seeks to generate alpha by allocating to sources of risk premium through factor-based models for credit selection. The Strategy allocates to measures of value, quality, and momentum captured through proprietary fair value models, measures of changes in default risk, and momentum signals derived from credit and equity assets. ESG factors are considered a component of the quality pillar at GMO and the portfolio is managed to target an overall ESG profile that is higher than that of the Bloomberg U.S Corporate Index. Risk is managed through quantitative portfolio construction methods that control for overall benchmark spread, duration, and risk characteristics.

MAJOR PERFORMANCE DRIVERS

Investment-grade corporate credit delivered a solid second quarter, supported by resilient investor demand and tighter spreads. The market absorbed above-average issuance well, including several large transactions from technology and hyperscaler issuers. Spread tightening more than offset the drag from higher Treasury yields, helping the asset class generate positive excess and total returns. Treasury yields moved higher across the curve, with 2-year, 5-year, and 10-year yields rising 38 bps, 28 bps, and 15 bps, respectively. The Federal Reserve left its target rate unchanged at 3.50%–3.75%, but its messaging turned more hawkish as policymakers continued to emphasize persistent inflation risks.

For the quarter, investment-grade corporate credit returned 1.4%, with excess returns of 1.2%. The index's spread over Treasuries tightened by 15 basis points, supporting broad-based gains across sectors. Finance Companies and Insurance led performance, reversing the prior quarter's pattern, while Communications and Technology lagged as spreads in those sectors tightened the least. Credit curves flattened during the quarter, with the 10+ year maturity segment producing the strongest excess returns.

The Systematic Investment-Grade portfolio generated positive alpha in the second quarter. Valuation, Company Fundamentals, and Momentum signals were the primary contributors to relative performance, while the Quality factor modestly detracted. Credit selection was strongest in Consumer Non-Cyclical and Transportation, while sector allocation was positive but did not contribute materially to alpha. An underweight in Communications and an overweight in Basic Industry added the most to relative performance, while an underweight in Insurance detracted.

Entering the third quarter of 2026, the portfolio is positioned with overweight in Technology and Energy and underweight in Communications and Banking.

SYSTEMATIC INVESTMENT GRADE CREDIT STRATEGY

RISKS

Risks associated with investing in the Strategy may include: (1) Management and Operational Risk: the risk that GMO's investment techniques will fail to produce desired results, including annualized returns and annualized volatility; (2) Market Risk - Fixed Income Investments: the market price of a fixed income investment can decline due to a number of market-related factors, including rising interest rates and widening credit spreads or decreased liquidity stemming from the market's uncertainty about the value of a fixed income investment (or class of fixed income investments); and (3) Credit Risk: the risk that the issuer or guarantor of a fixed income investment or the obligor of an obligation underlying an asset-backed security will be unable or unwilling to satisfy its obligation to pay principal and interest or otherwise to honor its obligations in a timely manner. This is not a complete list of risks associated with investing in the Strategy. Please contact GMO for more information.

Composite Inception Date: 30-Sep-20

Performance Returns: Performance for the year of inception is less than a full calendar year. Returns shown for periods greater than one year are on an annualized basis. To obtain performance information to the most recent month-end, visit www.gmo.com. **Performance data quoted represents past performance and is not indicative of future results.** Net returns are presented after the deduction of a model advisory fee and incentive fee if applicable. These returns include transaction costs, commissions and withholding taxes on foreign income and capital gains and include the reinvestment of dividends and other income, as applicable. Fees paid by accounts within the composite may be higher or lower than the model fees used. Gross returns are presented gross of management fees and any incentive fees if applicable. These returns include transaction costs, commissions, withholding taxes on foreign income and capital gains and include the reinvestment of dividends and other income, as applicable. If management and incentive fees were deducted performance would be lower. For example, if, before fees, the strategy were to achieve a 10% annual rate of return above its hurdle rate each year for ten years, and an annual advisory fee of 1% and incentive fee of 20% of net returns above the hurdle rate were charged during that period, the resulting average annual net return (after the deduction of management and incentive fees) would be approximately 7.20%. **GMO LLC claims compliance with the Global Investment Performance Standards (GIPS®). Actual fees are disclosed in Part 2 of GMO's Form ADV and are also available in each strategy's Composite Report.**

IMPORTANT INFORMATION

Benchmark(s): The Bloomberg US Corporate Index measures the investment grade, fixed-rate, taxable corporate bond market. It includes USD denominated securities publicly issued by US and non-US industrial, utility, and financial issuers. The index includes securities with remaining maturity of at least one year.

The above information is based on a representative account in the Strategy selected because it has the fewest restrictions and best represents the implementation of the Strategy.
