

Key Investor Information

This document provides you with key investor information about this fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this fund. You are advised to read it so you can make an informed decision about whether to invest.

GMO Global Equity Allocation Investment Fund --a sub-fund of GMO Funds plc Class A CHF (ISIN: IE00BRKD2W38)

This fund is managed by KBA Consulting Management Limited (the “Manager”)

Objectives and Investment Policy

The fund aims to achieve positive returns.

The fund will invest primarily in shares and related securities which are listed or traded on markets globally.

The fund identifies investment opportunities based on an analysis of companies’ published financial information and corporate behaviour, securities’ prices, equity and bond markets and the overall economy. Investments are selected using a combination of investment methods to identify investments that the investment manager believes present positive return potential relative to other securities in the fund’s investment universe.

The fund may use instruments whose value is determined by changes in the value of the underlying assets they represent (derivatives). Derivatives may be used for the reduction of risk and cost and the generation of additional capital or income.

The fund is actively managed and does not manage the fund to, or control the fund’s risk relative to, any securities index or

securities benchmark. The fund uses the MSCI AC World Index for performance comparison purposes only (the “Comparator Index”). Although the fund’s securities may be components of the Comparator Index, the fund’s investment manager may or may not invest in securities not included in the Comparator Index.

For more information about the investment policy, see “Investment Objectives and Policies of the Funds” in the fund’s prospectus available at www.gmo.com.

You may sell your shares usually on each business day (generally a day on which banks in Dublin and London and the New York Stock Exchange are open) by sending your request to State Street Fund Services (Ireland) Limited before 2.00 pm (Irish time) on the preceding business day.

Income is reinvested into the fund.

Recommendation: this fund may not be appropriate for investors who plan to withdraw their money within the short term.

The risk category is based on simulated and historical data and may not be a reliable indicator of the future risk profile of the fund. The risk category shown is not guaranteed and may change over time.

The numerical scale is complex. For example, 2 is not twice as risky as 1. The gap between 1 and 2 might not be the same as the gap between 5 and 6. A category 1 fund is not a risk-free investment – the risk of losing your money may be small, but the chance of making gains is also limited.

The fund is in category 6 because it invests in companies worldwide and so historically there has been a greater fluctuation in the price of the shares of the fund than other funds (such as money market funds).

Risks materially relevant to the fund which may not be adequately captured by the indicator:

The fund may not achieve its investment objective and the value of shares in the fund may fall.

The market value of a share may decline for reasons directly related to the issuing company, such as management performance, borrowing levels and reduced demand for its goods or services.

Investments in issuers in emerging or less developed countries will be subject to greater risk due to political, economic, corporate governance, legal, market, accounting and other risks.

The use of derivatives involves the risk that their value may not move as expected relative to the value of the relevant underlying assets, rates or indices. Derivatives also present other risks, including market risk, liquidity risk, currency risk and counterparty risk.

Low trading volume, lack of a market maker, large size of position or legal restrictions may limit or prevent the fund from selling particular securities or unwinding derivative positions at desirable prices.

Fluctuations in exchange rates can adversely affect the market value of foreign currency holdings and investments denominated in foreign currencies.

Commodity prices can be extremely volatile, and exposure to commodities can cause the net asset value of the fund’s shares to decline or fluctuate in a rapid and unpredictable manner.

See the description of the risks applicable to the fund in “Risk Factors” in the prospectus.
