

INTERNATIONAL EQUITY

OVERVIEW

The GMO International Equity Fund seeks to generate high total return by investing primarily in non-U.S. developed market equities. The Fund measures its performance against the MSCI EAFE Index for performance comparison purposes.

The Fund's investment approach is grounded in the Systematic Equity team's belief that, in the short term, equity markets exhibit exploitable inefficiencies as a result of irrational investor actions, the imperfect flow of information, and the participation of non-economic actors, while in the long-term returns are ultimately driven by economic reality. The Fund aims to take advantage of this inefficiency by utilizing a multi-factor valuation model in conjunction with other methods, such as cross-asset signals and corporate alerts, to identify mispriced equity securities.

Risks: Risks associated with investing in the Fund may include: (1) Market Risk -Equities: The market price of an equity may decline due to factors affecting the issuer or its industry or the economy and equity markets generally. Declines in stock market prices generally are likely to reduce the net asset value of the Fund's shares. (2) Non-U.S. Investment Risk: The market prices of many non-U.S. securities (particularly of companies tied economically to emerging countries) fluctuate more than those of U.S. securities. Many non-U.S. markets (particularly emerging markets) are less stable, smaller, less liquid, and less regulated than U.S. markets, and the cost of trading in those markets often is higher than it is in U.S. market. (3) Management and Operational Risk: The risk that GMO's investment techniques will fail to produce desired results. For a more complete discussion of these risks and others, please consult the Fund's prospectus. Annualized Returns may include the impact of purchase premiums and redemption fees. Returns shown for periods greater than one year are on an annualized basis. To obtain performance information to the most recent month-end, visit www.gmo.com.
