

GMO OPPORTUNISTIC INCOME FUND

THE OPPORTUNITY

The structured finance asset class offers a range of opportunities due to both its inherently fragmented nature and the inefficiencies caused by market segmentation, stale ratings, and structural anomalies.

- **Structural Inefficiencies:** Securities in most parts of the market face discrete pools of loans (where the loans backing one deal are different from all other deals). Individual deals and securities are replete with cash flow waterfall and transactional document differences, requiring intensive research but creating significant alpha potential.
- **Fragmentation:** The sector offers an enormous amount of heterogeneity with respect to sectors, subsectors, and individual bonds. This creates opportunity for an unconstrained, agnostic investor like GMO.
- **Unique Risk Attributes:** The sector can offer both a lower beta to the overall market and lower correlation to traditional credit sectors. The ABS sector, for instance, is heavily floating rate and has a low spread duration. Much of the sector is also directly exposed to the U.S. consumer, creating a different (and many would say attractive) credit exposure in the current environment.

OUR APPROACH

The GMO Opportunistic Income Fund seeks capital appreciation and current income by investing in the most attractively priced sectors and securities in the structured finance marketplace. Using a relatively unconstrained approach, the team combines top-down and bottom-up security selection methods to identify the best opportunities from a pure risk/return perspective.

Top-Down: Sectors are ranked based on differences in fundamentals, seasoning, convexity, and place in the leveraging/de-levering cycle. These views are then paired with overlays on capital structure and duration to determine which parts of the curve and maturity spectrum offer the most relative opportunity.

Bottom-Up: Once top-level allocations are set, the team applies sector-level expertise to determine security-level positions, drawing on a range of metrics such as loan-level historical performance, leverage metrics, loan structure, and specific transactional elements measured in a consistent and repeatable way.

Portfolio Construction & Risk Management: Once security-level opportunities have been identified, we apply our systematic portfolio construction and risk management process to determine any required credit or interest rate hedges to neutralize secular risks.

WHY STRUCTURED PRODUCTS?

Market size of securitized and corporate credit

We focus on idiosyncratic non-agency risk

INTEREST RATE DURATION

¹The credit ratings above may encompass emerging debt, developed rates, and asset-backed exposure. Ratings for the emerging debt and developed rates portions of the portfolio are derived by taking the Standard and Poor's country ratings and applying these ratings to the country exposures of the portfolio. For the asset-backed portion of the portfolio, credit ratings are derived by using the lowest rating among rating agencies at the issue level. Final credit ratings are expressed based upon Standard and Poor's ratings scale. Standard & Poor's rates securities from AAA (highest quality) to C (lowest quality), and D to indicate securities in default; some securities are not rated (NR). BB and below are considered below investment grade securities. Copyright 2021, S&P Global Market Intelligence. GMO OPPORTUNISTIC INCOME FUND

ABOUT GMO

Founded in 1977, GMO is a global investment manager committed to delivering superior performance and advice to our clients. Our sole business is investment management, and we are privately owned, which allows us to maintain a singular focus on achieving outstanding long-term outcomes for our clients. Offering solutions across multi-asset class, equity, fixed income, and alternative strategies, we are grounded in a common philosophical belief that a long-term, valuation-based approach will maximize risk-adjusted returns. We also believe that material ESG factors will be determinants of success of the companies and countries in which we invest, and that integrating ESG into investment processes can improve our long-term results. Known for our willingness to challenge the status quo and our creative approach to investment problems, we candidly share our market views and take bold, differentiated portfolio positions when conditions warrant them.

An investor should consider the Fund's investment objectives, risks, charges and expenses before investing. This and other important information can be found in the funds prospectus. To obtain a prospectus please www.gmo.com. Read the prospectus carefully before investing. The GMO Trust funds are distributed in the United States by Funds Distributor LLC. GMO and Funds Distributor LLC are not affiliated.

Risks associated with investing in the Fund may include those as follows. (1) Credit Risk: The risk that the issuer or guarantor of a fixed income investment or the obligor of an obligation underlying an asset-backed security will be unable or unwilling to satisfy its obligation to pay principal and interest or otherwise to honor its obligations in a timely manner. The market price of a fixed income investment will normally decline due to the issuer's, guarantor's, or obligor's failure to meet its payment obligations or in anticipation of such failure. (2) Market Risk - Asset-Backed Securities: The market price of asset-backed securities, like that of other fixed income investments with complex structures, can decline for a variety of reasons, including market uncertainty about their credit quality and the reliability of their payment streams. (3) Illiquidity Risk: Low trading volume, lack of a market maker, large position size or legal restrictions may limit or prevent the Fund from selling particular securities or closing derivative positions at desirable prices. For a more complete discussion of these risks and others, please consult the Fund's prospectus.

The Fund is the accounting and performance successor to GMO Debt Opportunities Fund, a former series of GMO Trust (the "Predecessor Fund"). The Predecessor Fund merged into the Fund (which was known as "GMO Short-Duration Collateral Fund" prior to the merger) on February 12, 2014. Performance of the Fund for periods prior to February 12, 2014 is that of the Predecessor Fund and reflects the Predecessor Fund's annual operating expenses (0.01% lower than those of the Fund immediately following the merger). For information regarding GMO Short-Duration Collateral Fund's performance history, please see page 236 of the Prospectus. From February 12, 2014 through December 31, 2016, the Fund operated as "GMO Debt Opportunities Fund" and had the same investment objective and pursued substantially identical investment strategies as the Predecessor Fund. Effective January 1, 2017, the Fund's investment objective changed from "positive total return" to "capital appreciation and current income" and, in conjunction with a change in the Fund's name from "GMO Debt Opportunities Fund" to "GMO Opportunistic Income Fund," the Fund eliminated its name policy that required the Fund to invest at least 80% of its assets in debt investments. Also effective January 1, 2017, the Fund's investment management fee increased from 0.25% to 0.40% of the Fund's average daily net assets. Performance of the Fund for periods prior to January 1, 2017 reflects the Fund's annual operating expenses during those periods, and would have been lower if the current management fee and annual operating expenses were in effect.

The Bloomberg U.S. Securitized + Index is an internally maintained benchmark computed by GMO, comprised of (i) the J.P. Morgan U.S. 3 Month Cash through 12/30/2016 and (ii) the Bloomberg U.S. Securitized thereafter.
