

## U.S. EQUITY

## OVERVIEW

The GMO U.S. Equity Strategy seeks to generate high total return by investing primarily in U.S. equities. The Strategy measures its performance against the S&P Composite 1500+ Index.

The Strategy's investment approach is grounded in the Systematic Equity team's belief that, in the short term, equity markets exhibit exploitable inefficiencies as a result of irrational investor actions, the imperfect flow of information, and the participation of non-economic actors, while in the long-term returns are ultimately driven by economic reality. The Strategy aims to take advantage of these inefficiencies by utilizing a multi-factor valuation model in conjunction with other methods, such as momentum and corporate alerts, to identify undervalued equity securities.

**Risks:** Risks associated with investing in the Strategy may include: (1) Market Risk - Equities: the market price of equities may decline due to factors affecting the issuer, its industries, or the economy and equity markets generally. Declines in stock market prices generally are likely to reduce the net asset value of the Fund's shares; (2) Management and Operational Risk: the risk that GMO's investment techniques will fail to produce desired results, including annualized returns and annualized volatility; and (3) Focused Investment Risk: the Fund invests its assets in the securities of a limited number of issuers, and a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund invested in the securities of a larger number of issuers. This is not a complete list of risks associated with investing in the Strategy. Please contact GMO for more information.
